About Us

Vision - We understand that the key to our vision is people, and that our success as a company depends on our employees' success. This is the core belief that drives our recruiting principles and inspires our strong focus in an environment that promotes productivity and professional growth for our team members.

Culture - AIS empowers people by fostering a culture of creativity and freedom. As a result, our employees are motivated to execute and deliver the best solution within fixed budgets and timelines. Our goal is to ensure the continuous evolution of technical competency and professional growth.

With offices in Austin, Houston, Oklahoma City, and DC, our employees solve business problems by designing and building efficient, reliable and scalable applications.

Perks and Culture

- Health coverage
- Tuition reimbursement and training
- Employee referral bonus
- Top-of-the-line equipment
- Creative and casual, teamwork environment
- Community involvement
- Company events and social gatherings

Examples of Interesting Projects

- USMC Global Control and Command Systems Portal to capture, manage and discover critical data converted to information to carry out the mission.
- Investigation Case Management System (ICMS) to automate the management of cases and prosecution of those who have fraudulently obtained government benefits.
- The US Army III Corps required an organizational portal to share classified information in vehicles during military operations. AIS used SharePoint to design a secure synchronization and replication system for updating existing documents across portal servers connected over low bandwidth networks.
- Business Process solution for Hercules Offshore that integrated two legacy systems into one streamlined incident reporting system which was deployed to drilling rigs all over the world in remote locations and ensured that Hercules continued to conduct operations in a safe and environmentally responsible manner.
- AIS architected a Task Management solution for the United States Air Force that enabled central management of task assignments. Task assignments involved "taskers" that originate from senior command and tasked down to the appropriate organization responsible for delivery of the requested information. The system supported the managing and tracking delegation history and the collection of information that is presented to senior leadership within the Air Force.
