CA Technologies is a F1000 company with a startup mentality—and we’re searching for incredible, bright talent to dominate the marketplace. CA has been a leading software company for nearly 4 decades with a global customer base that includes the majority of the F2000 - but what excites us today is the opportunity to redefine the future of our industry in the age of cloud, mobile, social and big data. We have a daring vision and a powerful, expanding solution set that helps the world’s most successful companies realize their boldest objectives.

PERKS AND CULTURE
• Tuition reimbursement and training
• Health Coverage
• Wellness program
• Retirement plan
• Sustainability/green initiatives

EXAMPLES OF INTERESTING PROJECTS
• Security - Accelerate the implementation of security infrastructure to enable delivery of new mobile and Web apps while protecting the enterprise from threats with agility.
• Mobility - The CA Management Cloud for Mobility portfolio consists of three complementary solution suites: Enterprise Mobility Management, Mobile DevOps and Enterprise Internet of Things.
• DevOps - DevOps teams must adopt a more agile development process, working in parallel instead of waiting on other teams to finish their components or for resources to become available.
• Big Data - Develop software to make the right portfolio decisions and gain a holistic view of IT services and assets.
• Development - Develop high quality applications faster by leveraging tools that create virtual integrations, enable parallel development and continuous testing.
