

SIGCOMM '83 Symposium

Communications Architectures & Protocols

University of Texas at Austin
March 8 & 9, 1983

Sponsored by ACM SIGCOMM in
cooperation with the Department
of Computer Sciences, University
of Texas at Austin

Computer Communication Review,
Volume 13, Number 2
ACM Order No.533830

The Association for Computing Machinery
11 West 42nd Street
New York, New York 10036

Additional copies of these Proceedings may be ordered prepaid from:

ACM Order Department
P.O. Box 64145
Baltimore, MD 21264

Please state the ACM Order Number:

Prices: ACM Members: \$15.00 prepaid
All others: \$20.00 prepaid

Message From The General Chairman

SIGCOMM '83 is the first symposium to be sponsored solely by the ACM Special Interest Group on Data Communication (SIGCOMM). The symposium builds on the momentum of the Computer Network Performance Symposium cosponsored last year with SIGMETRICS and SIGOPS. An annual SIGCOMM symposium is intended to complement SIGCOMM's quarterly newsletter, the Computer Communication Review, now in its thirteenth year, in serving the almost 5000 members of SIGCOMM.

The tremendous amount of current development activity in computer communications architectures and protocols is reflected in the large number of papers submitted to the symposium. The eleven sessions of refereed papers are complemented by the opening panel and three other panel sessions on the current status of network architectures and protocol implementation experience. It is an international symposium, with about one third of the papers from outside the United States, about the same ratio as with the SIGCOMM membership.

In conjunction with the symposium, two tutorials are being presented. Richard desJardins surveys the international standards for open systems interconnection. David Clark reviews practical considerations of protocol implementation.

We are grateful to the Department of Computer Sciences, University of Texas at Austin, for their cooperation and for arranging the use of the facilities of the Joe C. Thompson Conference Center. I am most appreciative to Simon Lam for organizing the program and for coordinating the Texas committee support. I also wish to thank the members of the symposium committee, the program committee, authors, and panelists for their efforts in making the symposium successful.

David C. Wood
General Chairman
ACM SIGCOMM '83 Symposium

Message From The Program Chairman

The ACM SIGCOMM '83 Symposium provides a forum for the presentation and discussion of state-of-the-art network architectures and protocols for data communications. All aspects of work, both theoretical and practical, pertaining to the entire life cycle of developing protocol systems and networks are of interest to the symposium: theory, systems analysis, architecture, design, implementation, standardization, etc. The symposium is epitomized by the title of the opening panel: Putting Protocols to Work. We are very fortunate to have three experts in the opening panel who will discuss the issues of putting protocols to work in the real world. They are: Vinton Cerf of MCI Communications Corporation, Louis Pouzin of CNET in France, and John Shoch of Xerox Corporation. All of them have had extensive experience and personal involvement in the design and implementation of operational networks and communication protocols. They will speak from their unique perspectives about the many difficulties that are encountered in deploying real networks and protocols, touching upon not only technical issues but also issues of standardization, user needs in various sectors of the marketplace, etc.

Following the opening panel, the symposium is organized into two tracks of parallel sessions, one primarily on design and implementation issues and the other primarily on verification and performance analysis issues.

On the practical side, the symposium's technical program has placed a strong emphasis on implementation experience. This is the primary concern of panel discussions in Session 3A and Session 4A. Session 6A is devoted to the development and implementation experience of a specific network, the computer science research network project (CSNET) sponsored by the National Science Foundation. Other sessions on practical issues include a panel on the current status of the development of protocol architectures and relevant standardization activities (Session 2A). Internetworking and issues of protocol compatibility are addressed in Session 8A. Session 7A is concerned with issues in the design of network operating systems. Some new ideas on network architectures and algorithms are presented in Session 5A.

On the theoretical side, the sessions may be classified into two categories. The first category includes sessions on analytical models and methods as well as empirical studies to evaluate the performance of new strategies and algorithms for various

protocol functions (Session 2B on analysis of network routing, Session 6B on performance studies, Session 7B on local network access protocols, and Session 8B on queuing models of protocols). The second category is concerned with formal models and techniques on the specification and verification of protocol systems. The logical correctness properties of such protocol systems are of interest. This category includes Sessions 3B and 4B on protocol verification methods. Session 5B on specification, testing and performance analysis of protocols is concerned with both the performance and logical behavior of protocols that can be specified using a layered model.

These proceedings include 34 articles* selected from 52 submitted papers. Two reviews were solicited for each paper submitted. The majority of the reviews were received on time. I would like to thank members of the program committee and the referees for their efforts in handling this tremendous task. Participants of panel sessions were invited to contribute short position papers. These position papers were not refereed.

In addition to the referees and program committee members, several other people made it easy and fun for me to do my job as Program Chairman. My hearty thanks go to Dave Wood (the General Chairman), Becky Hutchings (Publicity), Manbir Kathuria (Proceedings), Kata Carbone (Registration), and Carole Kincaid (Treasurer). Last but not least, I would like to thank Al Dale, Chairman of the University of Texas Department of Computer Sciences for the generous support and encouragement he has given to this undertaking.

Simon S. Lam
Program Chairman
ACM SIGCOMM '83 Symposium

*Outstanding papers were selected and forwarded to Anita Jones, Editor-in-Chief of the new ACM Transactions on Computer Systems (TOCS). They were selected on the basis of unanimously strong reviews and suitability for journal publications. (Papers with University of Texas authors were excluded from consideration.) After further reviews, two papers were accepted for publication in TOCS. These two articles have not been included in these proceedings. Preprints of them are made available for distribution at the symposium.

Table of Contents

SESSION 1. KEYNOTE SESSION	1
General Chair: David C. Wood, <i>The MITRE Corporation, McLean, VA</i>	
Program Chair: Simon S. Lam, <i>University of Texas at Austin, Austin, TX</i>	
Putting Protocols to Work	
Vinton Cerf, <i>MCI Communications Corp., Washington, D.C.</i>	
Louis Pouzin, <i>CNET, France</i>	
John Shoch, <i>Xerox Corp., Palo Alto, CA</i>	
SESSION 2A. PANEL: NETWORK ARCHITECTURES—CURRENT STATUS	3
Chair: Carl Sunshine, <i>Sytek, Inc., Los Angeles, CA</i>	
ISO Open Systems Interconnection Standardization Status Report	4
Richard desJardins, <i>Computer Technology Associates, Inc., Englewood, CO</i>	
Development of the DoD Protocol Reference Model	6
Gregory Ennis, <i>Sytek, Inc., Mountain View, CA</i>	
Evolution of Xerox's Network Systems Architecture	8
Lawrence Garlick, <i>Xerox, OSD, Palo Alto, CA</i>	
Higher-Level Protocols are not Necessarily End-to-End	10
Gregor V. Bochmann, <i>University of Montreal, Montreal, Canada</i>	
SESSION 2B. ANALYSIS OF NETWORK ROUTING	13
Chair: Mario Gerla, <i>University of California, Los Angeles, CA</i>	
Analysis of Routing Table Update Activity After Resource Failure in a Distributed Computer Network	14
Marjory J. Johnson, <i>University of Missouri, St. Louis, MO</i>	
Path Assignment for Virtual Circuit Routing	21
Eli M. Gafni, <i>University of California, Los Angeles, CA</i> ; and Dimitri P. Bertsekas, <i>Massachusetts Institute of Technology, Cambridge, MA</i>	
Optimal Routing in Closed Queueing Networks	26
Hiroshi Kobayashi, <i>KDD, Tokyo, Japan</i> ; and Mario Gerla, <i>University of California, Los Angeles, CA</i>	
SESSION 3A. PANEL: PROTOCOL IMPLEMENTATION EXPERIENCE	27
Chair: Jon Postel, <i>USC Information Sciences Institute, Marina Del Rey, CA</i>	
David D. Clark, <i>MIT Laboratory for Computer Science, Cambridge, MA</i>	
Douglas Comer, <i>Bell Laboratories, Murray Hills, NJ</i>	
William Joy, <i>Sun Microsystems, Inc., Mountain View, CA</i>	
Steven F. Holmgren, <i>The MITRE Corporation, McLean, VA</i>	
Robert F. Gurwitz, <i>Bolt Beranek and Newman Inc., Cambridge, MA</i>	

SESSION 3B. PROTOCOL VERIFICATION METHODS I	29
Chair: Simon S. Lam, <i>University of Texas at Austin, Austin, TX</i>	
Mechanical Verification of a Data Transport Protocol	30
Benedetto L. Di Vito, <i>Sytek, Inc., Mountain View, CA</i>	
Specification and Verification of an HDLC Protocol with ARM Connection Management and Full-Duplex Data Transfer	38
A. Udaya Shankar and Simon S. Lam, <i>University of Texas at Austin, Austin, TX</i>	
Reachability Analysis of Protocols with FIFO Channels	49
Son T. Vuong, <i>University of British Columbia, Vancouver, BC, Canada</i> ; and Donald D. Cowan, <i>University of Waterloo, Waterloo, Ontario, Canada</i>	
SESSION 4A. PANEL: COMMUNICATION NETWORKS AND PROTOCOL IMPLEMENTATIONS	59
Chair: A. C. Salazar, <i>Bell Laboratories, Holmdel, NJ</i> John Daigle, <i>Clemson University, SC</i>	
X.25 Implementation The Untold Story	60
Karen L. Cohen and Roger P. Levy, <i>Bell Laboratories, Holmdel, NJ</i>	
A Layered Architecture for a Programmable Shared Data Network	65
Richard Liu, <i>American Bell Inc., Lincroft, NJ</i>	
SESSION 4B. PROTOCOL VERIFICATION METHODS II	67
Chair: Carl Sunshine, <i>Sytek, Inc., Los Angeles, CA</i>	
Maximal Progress State Exploration	68
Mohamed Gouda and Y. T. Yu, <i>University of Texas at Austin, Austin, TX</i>	
A Methodology for Verifying Request Processing Protocols	76
Christos N. Nikolaou, <i>IBM Yorktown Heights, NY</i> ; Edmund M. Clarke, Jr., <i>Carnegie-Mellon University, Pittsburgh, PA</i> ; Nissim Francez, <i>Technion, Haifa, Israel</i> ; and Stephen A. Schuman, <i>Massachusetts Computer Associates, Inc., Wakefield, MA</i>	
Proving Safety Properties for a General Communication Protocol	84
Marty Ossefort, <i>IBM, Austin, TX</i>	
SESSION 5A. NETWORK ARCHITECTURES AND ALGORITHMS	93
Chair: Kiyoshi Maruyama, <i>IBM Research, Yorktown Heights, NY</i>	
Staged Circuit Switching for Network Computers	94
Mauricio Arango, Hussein Badr, and Arthur J. Bernstein, <i>State University of New York at Stony Brook, Stony Brook, NY</i> ; and David Gelernter, <i>Yale University, CT</i>	
A Distributed Routing Scheme with Mobility Handling in Stationless Multi-hop Packet Radio Networks	101
Abdelfettah Belghith and Leonard Kleinrock, <i>University of California, Los Angeles, CA</i>	
Mechanisms that Enforce Bounds on Packet Lifetimes	109
Lansing Sloan, <i>Lawrence Livermore National Laboratory, Livermore, CA</i>	

SESSION 5B. SPECIFICATION, TESTING AND PERFORMANCE ANALYSIS OF PROTOCOLS	111
Chair: Mohamed Gouda, <i>University of Texas at Austin, Austin, TX</i>	
Description, Simulation and Implementation of Communication Protocols using PDIL	113
J. P. Ansart, V. Chari, M. Neyer, O. Rafiq, and D. Simon, <i>Agence de l'Informatique, Paris, France</i>	
Synchronization Issues in Protocol Testing	121
Behcet Sarikaya, <i>McGill University, Montreal Canada</i> ; and Gregor V. Bochmann, <i>University of Montreal, Montreal, Canada</i>	
Relationship between Performance Parameters for Transport and Network Services	129
K. S. Raghunathan, J. A. Barchanski, and G. V. Bochmann, <i>University of Montreal, Montreal, Canada</i>	
SESSION 6A. THE COMPUTER SCIENCE NETWORK (CSNET)	137
Chair: Peter J. Denning, <i>Purdue University, West Lafayette, IN</i>	
History and Overview of CSNET	138
Peter J. Denning, <i>Purdue University, West Lafayette, IN</i> ; Anthony Hearn, <i>Rand Corporation, Santa Monica, CA</i> ; and C. William Kern, <i>National Science Foundation, Washington, D.C.</i>	
Architecture of the CSNET Name Server	146
L. Landweber, M. Litzkow, D. Neuhengen, and M. Solomon, <i>University of Wisconsin, Madison, WI</i>	
CSNET Protocol Software: The IP-to-X.25 Interface	154
Douglas Comer and John T. Korb, <i>Purdue University, West Lafayette, IN</i>	
SESSION 6B. PERFORMANCE STUDIES	161
Chair: Wesley W. Chu, <i>University of California, Los Angeles, CA</i>	
Dynamic Route Selection Algorithms for Session Based Communication Networks	162
Kiyoshi Maruyama, <i>IBM, Yorktown Heights, NY</i> ; and David Shorter, <i>IBM Information Systems Group, Irving, TX</i>	
Simulation Studies of the Behavior of Multihop Broadcast Networks	170
M. Y. Elsanadidi and Wesley W. Chu, <i>University of California, Los Angeles, CA</i>	
Packet-voice Communication on an Ethernet Local Computer Network: An Experimental Study	178
Timothy A. Gonsalves, <i>Stanford University, Stanford, CA</i>	
SESSION 7A. ISSUES IN NETWORK OPERATING SYSTEM DESIGN	187
Chair: E. Douglas Jensen, <i>Carnegie-Mellon University, Pittsburgh, PA</i>	
Distributed Co-operating Processes and Transactions	188
Lui Sha, E. Douglas Jensen, Richard F. Rashid, and J. Duane Northcutt, <i>Carnegie-Mellon University, Pittsburgh, PA</i>	
Interprocess Communication System of the MT35 Digital Exchange	197
G. J. Battarel and H. F. Savary, <i>Thomson-CSF Telephone, Boulogne, France</i>
