Dear Class,

I know I promised you a new homework. But without having use of a UML tool any such homework would simply be more of the same kind of problem in homework 1. Count on a homework on Monday. In the meantime here are some exercises. (do not hand in).

1) Per class, those of you who have no experience with SQL databases go to the on-line SQL tutorial:

http://www.w3schools.com/sql/sql_tryit.asp
   a. Write a query to determine companies located in Paris
   b. Write a query to determine companies whose name begins with letters m through p.

2) Consider the following text problems. Develop the data model, but do no concern yourself with the corresponding database schema. (When we learn to use the Rational Rose tool, it will generate it for you.)
