CS394R
Reinforcement Learning: Theory and Practice

Peter Stone

Department of Computer Science
The University of Texas at Austin

Good Morning Colleagues

- Are there any questions?

Logistics

- Make progress on final projects!

Logistics

- Make progress on final projects!

- This week's readings: Practical RL

Logistics

- Make progress on final projects!

- This week's readings: Practical RL

  – A general study, motivated by applications like the ones we've read
  – A survey of transfer learning

Logistics

- Make progress on final projects!

- This week's readings: Practical RL

  - A general study, motivated by applications like the ones we've read
  - A survey of transfer learning

- Next week's readings: Health and Sustainablity

Logistics

- Make progress on final projects!

- This week's readings: Practical RL

    – A general study, motivated by applications like the ones we've read
    – A survey of transfer learning

- Next week's readings: Health and Sustainablity

    - Epilepsy, (species management), and wind turbine optimization

CMA-ES

- Used successfully for walk optimization

Discussion

- What can a study like this teach us?

Discussion

- What can a study like this teach us?

- How do the results compare to theoretical results?

Discussion

- What can a study like this teach us?

- How do the results compare to theoretical results?

- What are the limitations?

Discussion

- What can a study like this teach us?

- How do the results compare to theoretical results?

- What are the limitations?

- Should it be followed up? If so, shat are the next steps?

Transfer Learning

- The return of the week 1 activity (Matthew Fong)

- break

- Metrics (Taylor Bloom)
