

## Quiz (Selected)

- Which is not a Data Manipulation Language construct?  
Create / **Select** / Insert / Update
- Why can it be challenging to embed EML statements into an OO program (e.g. python, java, etc)?  
**Datatype differences** / Naming convention differences / Access differences / None of the Above

## SQL Queries (Basic Form)

**SELECT** <list of fields>

**FROM** <single table>

**WHERE** <boolean condition>

**ORDER BY** <list of fields> [ **DESC** ]

Question to think: why is it better to put “order by” after “where”?

## GCP Big Query

You can **practice SQL** online in Big Query with massive public data.

For more details on Big Query SQL **syntax**, see [google's official doc](#)

If you receive errors when importing table, maybe try **older UI**.
