Contents

Distance Learning
Long Paper
Teaching via the Internet: The Impact of the Internet as a communication medium on Distance Learning Introductory Computing Students 1
Linda Carswell

Short Papers
Using Multimedia Communication Technologies in Distance Learning 6
Thomás Robles, David Fernandéz, Encarna Pastor and Santiago Alamillo
The use of the WWW to support distance learning through NTU 8
Douglas D. Dankel II
Teaching C++ on the WWW 11
Martin Hitz and Stefan Kögeler

Computer Graphics
Long Paper
Improving Discrete Mathematics and Algorithms Curricula with LINK 14
Jonathan Berry

Short Papers
An interactive learning system visualizing Computer Graphics Algorithms 21
Achim W. Janser
Excel as an algorithm animation environment 24
E. Rautama, E. Sutinen and J. Tarhio
A Genetic Algorithms Tutorial Tool for Numerical Function Optimisation 27
E. K. Burke and D. B. Varley

Interactive Learning
Long Paper
A model for the creation of online courseware 31
Pamela B. Lawhead

Short Papers
Monitoring and evaluating a redesigned first year programming course 37
Dianne Hagan, Judy Sheard and Ian Macdonald
Instructional Software for Closed Laboratories in CS1 40
Mohsen Beheshti and Bill Waller
Integrating design and simulation into a computer architecture course 42
Deborah L. Knox

Issues and Solutions
Long Paper
Cost Effective Multimedia Courseware Development 45
C. J. Pilgrim, Y. K. Leung and D. D. Grant

Short Papers
Teaching Software Engineering and Project Management to 300 Participants without Drain of Quality or Intensity 51
Stefan Biffl and Thomas Grechenig
A pedagogical pattern for bringing service into the curriculum via the web  
Carl Erickson

Algorithm Visualization / Java

Short Papers
Visual programming with Java; an alternative approach to introductory programming  
Frank Wester, Marleen Sint and Peter Kluit
Algorithm Visualization on the World Wide Web - the Difference Java Makes!  
Thomas L. Naps
Distributed Algorithms in Java  
Mordechai Ben-Ari

New Settings for Teaching CS Topics

Long Paper
Design and realization of an interactive multimedia server in education  
K. Coninx, B. Daems, F. Van Reeth and E. Flerackers,

Short Papers
Using a network simulation package to teach the client-server model  
Michael W. Dixon, Tanya J. McGill and Johan M. Karlsson
Recursion and Grammars for CS2  
Viera K. Proulx
Concurrent Programming CAN be Introduced into the Lower-Level Undergraduate Curriculum.  
Michael B. Feldman and Bruce D. Bachus

Computer Mediated Communication

Long Paper
Using online seminars to demonstrate the social psychological impacts of computer-mediated communication systems  
Jacqueline Taylor

Short Papers
International Initiative  
Anita Jawary, Christiana Birchak and Susan Strack Vargo
Use of computer conferencing to teach a course on humans and computers  
Jacob Palme and Sirkku Männikö
Ethics, Programming and Virtual Environments  
Michael Houle and Simon

Assessment and Evaluation

Long Paper
Teaching Programming through Paperless Assignments: an empirical evaluation of instructor feedback.  
Blaine Price and Marian Petre

Short Papers
Computer managed, open question, open book assessment  
John Rosbottom
Innovative Ways to Motivate Students

Long Paper

*Multi-media integrated into CS2: An interactive children's story as a unifying class project.*

Ursula Wolz, Daniel Domen and Michael McAuliffe

Short Papers

*VIBDaST: A Virtual Interactive Book as a Data Structures Teaching aid*

Dimitrios Theotokis, George Gyftodimos, Panagiotis Georgiadis and George Philokyprou

*A fantasy adventure game as a learning environment: Why learning to program is so difficult and what can be done about it.*

Rob Moser

*CLAP: teaching data structures in a creative way*

V. Meisalo, E. Sutinen and J. Tarhio

Evaluation/Assessment Experience to Enhance Learning

Long Paper

*CS Student Research Experience Applied to Developing Instructional Technology*

Dawn Cizmar

Short Papers

*WebCT and first year: student reaction to and use of a web-based resource in first year Computer Science*

Murray W. Goldberg

*Does collaborative hypertext support better engagement in learning of the basics in informatics?*

Pekka Makkonen

*OBOA model of explanation module in intelligent tutoring shell*

Ljubomir Jerinic and Vladan Devedzic

Distance Education: Systems and Practices

Short Papers

*Distance learning of the management of software projects*

Marie-Michèle Boulet

Panels

*You Learned All You Need To Design Educational Software Design In Kindergarten*

Hal Bergel, Cathleen Norris, Elliot Soloway, Harriet Taylor and Joe Turner

*Changing Computer Science Curricula : Planning for the Future*

Barbara Boucher Owens, Shirley Booth, Marian Petre and Anders Berglund

*Using Java in Computer Science Education*

Nan C. Schaller, Michael Berman, Judith Bishop, Paddy Nixon, Evelyn Rozanski and Peter Welch

Working Groups

*Group 1: Designing laboratory materials for computing courses*

Deborah L. Knox and Daniel T. Joyce
Group 2: Using the WWW as the delivery mechanism for interactive, visualization-based instructional modules 143
Thomas Naps

Group 3: The Web and distance learning: What is appropriate and what is not 144
Pamela B. Lawhead

Group 4: Using IT To Integrate Societal And Ethical Issues In The CS/IS Curriculum 144
Mary J. Granger and Joyce Currie Little

Group 5: Computer Mediated Communication in Collaborative Educational Settings 145
Ursula Wolz and Jacob Palme

Group 6: Harnessing technology for effective inter/intra-institutional collaboration 145
Marian Petre and Douglas Siviter

Group 7: Perspectives on innovations in the computing curriculum 146
John Impagliazzo and Michael Goldweber

Index of authors 147
