

Detailed tables of contents for Working Group reports

Developing laboratories for the SIGCSE Computing Laboratory Repository: guidelines, recommendations, and sample labs (p. 1)

Report of the ITiCSE'97 Working Group on Designing Laboratory Materials for Computing Courses

- | | |
|---|---|
| 1 Introduction | 5.3 Lab activity on shortest path with a Web interface |
| 2 The SIGCSE Computing Laboratory Repository | 5.4 Filtration methods for approximate pattern matching lab activity |
| 2.1 Editor-reviewed abstracts | 6 Peer-reviewed laboratory activities |
| 2.2 Peer-reviewed laboratories | 6.1 Requirements for a peer-reviewed laboratory activity |
| 3 Qualities of a good lab | 6.2 Guidelines for referees |
| 3.1 Completeness | 7 Recommendations for future work |
| 3.2 Portability | 8 Summary of working group's experiences |
| 3.2.1 Essential materials included | 9 Concluding remarks |
| 3.2.2 Local assumptions removed | Appendix A Instructor cover sheet for lab on effects of hash table properties on retrieval efficiency |
| 3.2.3 External URLs avoided | Appendix B Instructor cover sheet for lab on an investigation of disk scheduling algorithms |
| 3.3 Flexibility | Appendix C Instructor cover sheet for lab on shortest path with Web interface |
| 3.4 Creativity | Appendix D Instructor cover sheet for lab on filtration methods for approximate pattern matching |
| 4 Instructor Cover Sheet information | |
| 5 Example laboratory activities | |
| 5.1 A file structures lab activity on hashing | |
| 5.2 A disk scheduling simulation laboratory project | |

Using the WWW as the delivery mechanism for interactive, visualization-based instructional modules (p. 13)

Report of the ITiCSE'97 Working Group on Visualization

- | | |
|---|---|
| 1 Desired outcomes | 4 Advantages and disadvantages of the Web |
| 2 Engaging the student with Web-based visualization | 4.1 Advantages |
| 3 Taxonomy of Web visualization delivery mechanisms | 4.2 Disadvantages |
| 3.1 Hypertext (HTML) | 5 Future evolution of Web |
| 3.2 Remote computation vs. local computation | 6 Survey of some available sites |
| 3.2.1 Local-run visualizations | 6.1 Non-interactive visualizations |
| 3.2.2 Applets | 6.2 Interactive visualizations with client-specific software |
| 3.2.3 Helper functions and plug-ins | 6.3 Interactive visualizations with CGI scripts |
| 3.2.4 Native code | 6.4 Interactive visualizations with Java applets |
| 3.2.5 Remote-run visualizations | 6.5 Complete visualization systems with automatic creation |
| 3.2.6 Distributed-run visualizations | 6.6 Complete visualization systems requiring program annotation |
| 3.3 Architectures for delivery | 7 Conclusions |
| 3.3.1 Model-view architecture | Appendix A Additional resources |
| 3.3.2 Other architectures | Appendix B Summary of URLs related to visualization |
| 3.4 Role of the student | |
| 3.5 Other mechanisms | |

The Web and distance learning: what is appropriate and what is not (p. 27)

Report of the ITiCSE'97 Working Group on the Web and Distance Learning

- 1 Background
 - 1.1 Purpose
 - 1.2 Audience
 - 1.3 Operational definitions of distance learning
 - 1.3.1 Components of distance learning
 - 1.3.2 Varieties of distance learning
 - 1.3.3 Web-based distance learning
- 2 Issues in distance learning
 - 2.1 Ethical considerations
 - 2.1.1 Institutional, societal, and global
 - 2.1.2 Equivalence of product
 - 2.1.3 Student integrity
 - 2.1.4 Intellectual property
 - 2.1.5 Effect on the profession
 - 2.2 Pedagogical issues
 - 2.2.1 The students
 - 2.2.2 The teacher
 - 2.2.3 Assessment
 - 2.3 Development issues for enabling Web-based distance learning
 - 2.3.1 Lesson development evaluation grid
 - 2.3.2 Evaluation points
- 2.4 Quality issues in Web-based distance learning
 - 2.4.1 Process quality
 - 2.4.2 Content quality
 - 2.4.3 Delivery quality
- 3 Conclusions
 - 3.1 Advantages and disadvantages of Web-based distance learning
 - 3.1.1 Advantages of using Web-based learning opportunities
 - 3.1.2 Disadvantages of Web-based learning opportunities
 - 3.2 Appropriate versus inappropriate use of Web-based distance learning techniques
 - 3.2.1 Appropriate uses
 - 3.2.2 Inappropriate uses
 - 3.2.3 Summary
 - 3.3 Summary and future research

Using information technology to integrate social and ethical issues into the computer science and information systems curriculum (p. 38)

Report of the ITiCSE'97 Working Group on Social and Ethical Issues in Computing Curricula

- 1 Introduction
- 2 The role of social and ethical issues in the curriculum
- 3 Structure and organization of content areas
 - 3.1 Description of the ethical issues
 - 3.2 Description of the curriculum content areas
- 4 Exercises
 - Exercise 1: The Internet and accuracy of data
 - Exercise 2: Privacy of medical records
 - Exercise 3: Collecting empirical data with a laptop computer
 - Exercise 4: Computer policies and World Wide Web
 - Exercise 5: Expert systems and professional codes of ethics
 - Exercise 6: Choice of language and systems testing
 - Exercise 7: Data collection for personnel monitoring
 - Exercise 8: Assessing quality of software
 - Exercise 9: Content advisories on the Internet
 - Exercise 10: Videos and information security
- 5 Observations and recommendations
- 6 Conclusions
- Appendix A Exercise template
- Appendix B Evaluation form
- Appendix C Additional resources

Computer-mediated communication in collaborative educational settings (p. 51)

Report of the ITiCSE'97 Working Group on CMC in Collaborative Educational Settings

- 1 Introduction
- 2 Goals
 - 2.1 General educational goals
 - 2.2 Economic factors
 - 2.2.1 Potential economic benefits
 - 2.2.2 Potential economic costs
- 3 A taxonomy of tools for communication and collaboration in education
 - 3.1 When and where
 - 3.1.1 When: synchronous / asynchronous
 - 3.1.2 Where: same place / different place
 - 3.2 CMC tools in education
- 4 New roles of teachers and students
 - 4.1 Constructivism
 - 4.2 Student as an active learner
- 5 The interaction between pedagogy and technology
 - 5.1 The temporal factor
 - 5.2 The motivation factor
 - 5.3 The meaningfulness factor
 - 5.4 The learning culture contributes to forward motion
- 6 Problems and possible solutions
 - 6.1 Varying prerequisite skills
 - 6.2 Need for troubleshooter
 - 6.3 More work for faculty
 - 6.4 Technical topics dominate
 - 6.5 Establishing community
 - 6.6 Unknown expectations
 - 6.7 Reliance on text-based tools
 - 6.8 Restriction to text-based exchanges
 - 6.9 Flexibility of environment
 - 6.10 Optional participation
 - 6.11 Varying participation
 - 6.12 Volume of traffic
 - 6.13 Weak students less visible
 - 6.14 Assessing student performance
 - 6.15 Lack of social experiences
- 7 Assessment
 - 7.1 Goals of assessment
 - 7.2 Issues in assessment
 - 7.2.1 Distinguishing group from individual work
 - 7.2.2 Side effects of assessment
 - 7.2.3 Assessment of process versus assessment of outcomes
 - 7.2.4 Identifying relevant data
 - 7.2.5 Lack of perspective by students
 - 7.2.6 Separating out Hawthorne effects
 - 7.2.7 Lack of baselines
 - 7.2.8 Expense of assessment
- 7.3 Approaches to summative assessment
 - 7.3.1 Mix of collaborative and individual criteria
 - 7.3.2 Type of work evaluated
 - 7.3.3 Level of evaluation
 - 7.3.4 Collection of work
 - 7.3.5 Evaluator
 - 7.3.6 Differences from formative assessment
- 7.4 Approaches to formative assessment
- 7.5 Approaches to comparative assessment
- 8 Software design issues
 - 8.1 Overview of collaborative software used in education
 - 8.1.1 Traditional conferencing software
 - 8.1.2 Web-based conferencing software
 - 8.1.3 Same-time messaging software
 - 8.1.4 Same-time video and audio
 - 8.1.5 Combined same-time and different-time software
 - 8.1.6 MUD systems
 - 8.1.7 Collaborative software with special educational support
 - 8.1.8 Multi-User simulations
 - 8.1.9 Multi-user word processing
 - 8.1.10 Multi-user information organizers
 - 8.2 Requirements on software for educational collaboration
 - 8.3 Virtual learning environments
 - 8.4 Platform issues
 - 8.4.1 Single platform software
 - 8.4.2 Multi-platform software
 - 8.4.3 Platform-independence using HTML, Java and JavaScript
 - 8.4.4 Plugins are not always platform-independent
- 9 Conclusions
- Appendix A Summary of URLs relevant to CMC for collaboration

Harnessing technology for effective inter- and intra-institutional collaboration (p. 70)

Report of the ITiCSE'97 Working Group on Supporting Inter- and Intra-institutional Collaboration

1. Introduction
 - 1.1 Strategy used by the working group
 - 1.2 Overview of the paper
2. Collaboration viewed generically
 - 2.1 Collaborative *work* — what is work?
 - 2.1.1 Views of organizations
 - 2.1.2 Information systems, decision making, management perspectives
 - 2.1.3 Office work
 - 2.2 *Collaborative work* — what is collaboration?
 - 2.2.1 The groupware perspective: communication, collaboration, coordination
 - 2.2.2 The groupware perspective for collaboration in education
 - 2.3 Summary: the generic view
3. Technology to support collaboration
 - 3.1 Introduction
 - 3.2 About the technology references
 - 3.3 Types of technology
 - 3.3.1 Technologies for communication
 - 3.3.2 Technologies for collaboration
 - 3.3.3 Technologies for coordination
 - 3.4 Specific products
 - 3.5 How to choose products
 - 3.6 Summary: technology to support collaboration
4. Reflections on academic collaboration across organizational boundaries
 - 4.1 Assessing collaboration
 - 4.2 Tactical and strategic reasons for academic collaboration
 - 4.3 Benefits are long-term and qualitative
 - 4.4 Multiple factors: the complexity of cross-boundary collaboration
 - 4.4.1 Cultures
 - 4.4.2 Multiple levels
 - 4.5 It comes down to individuals
 - 4.6 Management
 - 4.7 What's special about academia?
 - 4.8 Summary: characterizing academic collaboration
5. Survey of experience of collaborative work
 - 5.1 Objectives of survey
 - 5.2 Results
 - 5.3 Summary: experience of collaboration
6. Practical steps to promote collaboration
 - 6.1 Web-based Information Gateways
 - 6.2 How to use the OPENCORE gateway
7. Summary but no simple conclusions
- Appendix A Product index of collaboration technologies
- Appendix B Questionnaire on collaboration experience
- Appendix C Survey response tallies

Historical perspectives on the computing curriculum (p. 94)

Report of the ITiCSE'97 Working Group on Historical Perspectives in Computing Education

1. Introduction
2. Historical background
 - 2.1 Development of computing curricula
 - 2.2 Lessons learned from the past
3. Foundations of the computing discipline
 - 3.1 Computing as mathematics
 - 3.2 Computing as engineering and design
 - 3.3 Computing as art
 - 3.3.1 Computing as literature
 - 3.3.2 Computing as an artistic endeavor
 - 3.4 Computing as science
 - 3.4.1 The nature of cognition and action
 - 3.4.2 Research and development (R&D) and computing
 - 3.5 Computing as a social science
 - 3.5.1 The individual versus the social
 - 3.5.2 Technology as tool versus product
 - 3.5.3 Anthropology and computing
 - 3.5.4 Computing as politics
 - 3.6 Computing as interdisciplinary
4. Pedagogy and methodology
 - 4.1 Problem-solving strategies
 - 4.2 Apprentice approaches
 - 4.3 Collaborative learning
 - 4.4 Distance learning
 - 4.5 Multimedia and computing
 - 4.6 Networked computing as a resource
 - 4.7 Introductory course considerations
 - 4.7.1 The core stage
 - 4.7.2 The advanced stage
 - 4.7.3 A possible modification of the introductory sequence
 - 4.8 Curricular integration
 - 4.9 Design, algorithms, and assessment
 - 4.10 Classroom effectiveness
 - 4.10.1 Physical environments
 - 4.10.2 Assessment and evaluation
5. Professionalism and ethics
 - 5.1 Professional responsibility
 - 5.2 Social and ethical issues
6. Fads: Choices, issues, and debates
 - 6.1 Computing environments
 - 6.2 Language fashions
 - 6.3 Computing for power users
7. Conclusions
