Due: Friday nights weekly
Points: 15 points each (10 entries totaling 150 points)

Description:
Write a journal that documents your progress on your semester project. You will add a new entry every week.

Required journal entry sections:
Each weekly entry must contain the following sections:

• **Title:** “Journal Entry for MM/DD/YYYY – Project Name”

• **Activities:** what you accomplished this week. List tasks you actually performed (not the ones you intended to perform). This may include:
  - Writing code: describe what functionality you worked on
  - Learning frameworks: describe what you went off and studied (and where you found it)
  - Assisting teammates: be specific about what you helped them with (as opposed to what they themselves did)

• **Challenges:** list anything that was particularly difficult or represented a problem for you this week.
  - Inability to find documentation on how to perform some task
  - Nasty bug you had trouble fixing
  - Issues with one or more of your teammates

  If you solved the problem, summarize how you accomplished that. **If you need help resolving an ongoing problem** (such as a problematic teammate) be sure to state clearly that you need my help!

• **Plans:** what you plan to work on next week. Note that your plans from last week do not need to match your activities for this week exactly. My intent is to help you plan ahead and instill some self-discipline over the course of the ten weeks. Previous students have told me this was actually helpful.

• **Comments:** this can include concerns (things that worry you about the project going forward), observations (things you noticed or learned this week that you think are noteworthy), and opinions (feeling good about things? Happy? Excited? Stressed? Nervous?).
Note that this is a project journal, not a course journal. You don’t need to report on homework, except (for example) to explain how a problem with your homework impacted your work on the project, or how you were able to apply something you learned in a particular assignment to your project.

It’s okay to say you didn’t accomplish anything this week once in a while. Time spent on projects ebbs and flows. However, if this becomes a pattern, I will penalize you. This is especially true when your teammates’ comments suggest a lot of activity.

Grading:

• For the first week, choose a format. I prefer titled sections with either paragraphs or bullet points in each section. You could even use this document as a template.

• Note that this is a project journal, not a course journal. You don’t need to report on homework, except (for example) to explain how a problem with your homework impacted your work on the project, or how you were able to apply something you learned in a particular assignment to your project.

• A typical journal entry will fit on one page. Initially, it may only be half a page, but there will be some weeks where you find you have a lot to talk about and you end up with two pages.

• Each week, prepend a new journal entry to the front of the journal. This means that the newest entry will be the front page, and the oldest entry will be the last page. Insert a page break so that each entry starts on a new page. Make sure the title/date is at the top of first page of each entry.

• When you’re finished, save the document as a PDF and attach it to the appropriate assignment in Canvas (“JE1”, “JE2”, etc.).

• Each journal entry is due on Canvas by 11:59 on Friday night. If you miss the deadline, you will get zero for the journal entry; however, you should still document the activities you completed in the following week’s journal entry to get “credit” for the work you accomplished on the project.

• There is a journal entry due almost every Friday for the rest of the semester.
  o No entry due 11/25 (Thanksgiving Break)
  o Final entry JE10 due on 12/2, the last full week of classes.

The last journal entry will document work you did on the final presentation as well as last-minute activities on the final version of the project itself. The “plans” section will not be necessary.
