Question posed on Project P0 -- get error when building P0

Hello Professor,
    Here's the error that I found. I got this error trying to run a CLEAN BUILD on NetBeans. If I just run the program by pressing the green arrow, the program runs without any problem. I am new to NetBeans so I might not want to be doing a clean build. Either way, here is the error that I received.
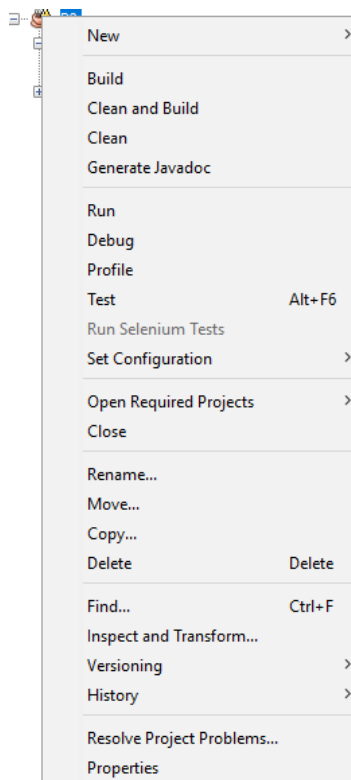

```
Output - P0 (clean,jar)  ✕

   ant -f C:\\Users\\Rohit\\Documents\\P0 -Dnb.internal.action.name=rebuild clean jar
   C:\Users\Rohit\Documents\P0\nbproject\build-impl.xml:63: Source resource does not exist: C:\Users\Rohit\Documents\P0\lib\nblibraries.properties
   BUILD FAILED (total time: 0 seconds)
```
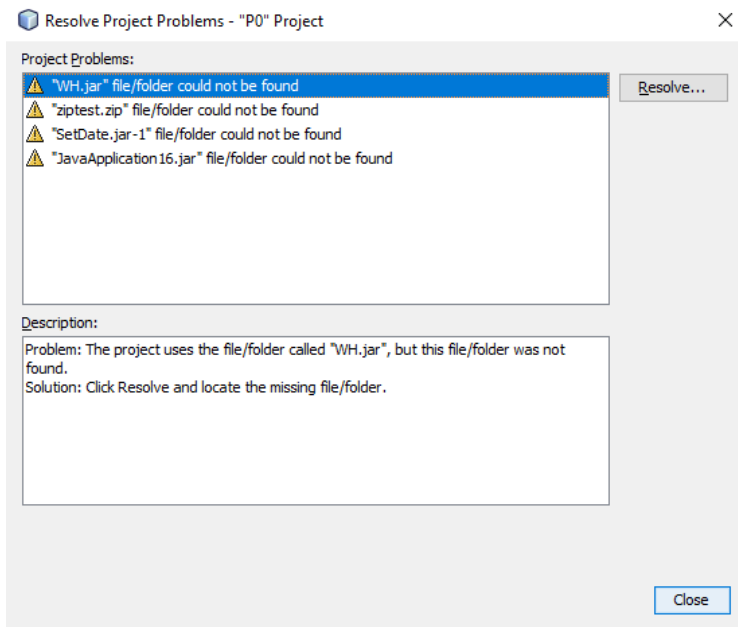

================
Correct. The fix is:
  - don't build the project
  - don't clean the project
  - repair it (read on)

You need to repair the project -- not exactly obvious, now that you ask. So here goes:
 1. Look at the Projects Window in Netbeans (which you can opened by "control-1", or at the top Window->Project)

  2. Right-click on Project P0, you'll get this drop-down menu:

3. Select from this menu "**Resolve Project Problems...**" second from the bottom. Doing so you will see the Project Problems:

Resolve Project Problems - "P0" Project   ✕

Project Problems:

⚠ "WH.jar" file/folder could not be found   Resolve...
⚠ "ziptest.zip" file/folder could not be found
⚠ "SetDate.jar-1" file/folder could not be found
⚠ "JavaApplication16.jar" file/folder could not be found

Description:

Problem: The project uses the file/folder called "WH.jar", but this file/folder was not found.
Solution: Click Resolve and locate the missing file/folder.

Close

4. All solutions to these problems are given to you in the **P0/Needed** directory. For example, to resolve the "WH.jar" file you locate the **P0/Needed** directory and within it the **WHExample** directory, within it you'll find **WH.class** file. Click the WH.class file, and you've resolved the WH.jar "problem".

Resolve Project Problems - "P0" Project   ✕

Project Problems:

◉ "WH.jar" file/folder could not be found   Resolve...
⚠ "ziptest.zip" file/folder could not be found
⚠ "SetDate.jar-1" file/folder could not be found
◉ "JavaApplication16.jar" file/folder could not be found

Description:

This problem was resolved

Close

Browse "WH.jar"   ✕

Look in: WHExample

Recent Items

📄 WH.class
📄 WH.java

Desktop

Documents

This PC

Network

File name: WH.class   Open
Files of type: All Files   Cancel

5. Do the same for the remaining "problems".
