

FP due December 9

- Next lecture ethics and the last written response
- eCIS evaluations: please fill these out for extra credit!

Multilinguality

- Other languages present some challenges not seen in English at all!
- Some of our algorithms have been specified to English
 - Some structures like constituency parsing don't make sense for other languages
 - Neural methods are typically tuned to English-scale resources, may not be the best for other languages where less data is available
- Question:
 - 1) What other phenomena / challenges do we need to solve?

2) How can we leverage existing resources to do better in other languages without just annotating massive data?

NLP in other languages

- Morphological richness: effects and challenges
- Morphology tasks: analysis, inflection, word segmentation
- Cross-lingual tagging and parsing
- Cross-lingual pre-training

This Lecture

Morphology

- Study of how words form
- Derivational morphology: create a new word from a root word estrange (v) => estrangement (n) become (v) => unbecoming (adj)
 - May not be totally regular: enflame => inflammable
- Inflectional morphology: word is inflected based on its context
 - I become / she becomes
 - Mostly applies to verbs and nouns

What is morphology?

Morphological Inflection

In English: I arrive you arrive

we arrive you arrive

In French:

he/she/it arrives they arrive

[X] arrived

| | singular | | | plural | |
|---|------------|------------|----------------|---------------|----------|
| | second | third | first | second | thi |
| | tu | il, elle | nous | vous | ils, e |
| | arrives | arrive | arrivons | arrivez | arrivent |
| | /a.ʁiv/ | /a.ĸiv/ | /a.ʁi.vɔ̃/ | /a.ĸi.ve/ | /a.ĸiv/ |
| | arrivais | arrivait | arrivions | arriviez | arrivaie |
| | /a.ʁi.vɛ/ | /a.ĸi.vɛ/ | /a.ʁi.vjɔ̃/ | /a.ʁi.vje/ | /а.кі.v |
| | arrivas | arriva | arrivâmes | arrivâtes | arrivère |
| | /a.ʁi.va/ | /a.ĸi.va/ | /a.ʁi.vam/ | /a.ʁi.vat/ | /а.кі.v |
| | arriveras | arrivera | arriverons | arriverez | arrivero |
| / | /a.ĸi.vĸa/ | /a.ĸi.vĸa/ | /a.ĸi.vĸɔ̃/ | /a.ĸi.vĸe/ | /а.кі.v |
| | arriverais | arriverait | arriverions | arriveriez | arrivera |
| 1 | /a.ĸi.vĸɛ/ | /a.ĸi.vĸɛ/ | /a.ĸi.və.ĸjɔ̃/ | /a.ĸi.və.ĸje/ | /а.кі.v |

Morphological Inflection

In Spanish:

| | | | singular | | plural | | | |
|------------|-------------|------------|---|--------------|-------------|------------|-------------|--|
| | | 1st person | 2nd person | 3rd person | 1st person | 2nd person | 3rd person | |
| | | уо | tú | él/ella/ello | nosotros | vosotros | ellos/ellas | |
| | | - | VOS | usted | nosotras | vosotras | ustedes | |
| | present | llego | llegas ^{tú} llegás ^{vos} | llega | llegamos | llegáis | llegan | |
| indicative | imperfect | llegaba | llegabas | llegaba | llegábamos | llegabais | llegaban | |
| | preterite | llegué | llegaste | llegó | llegamos | llegasteis | llegaron | |
| | future | llegaré | llegarás | llegará | llegaremos | llegaréis | llegarán | |
| | conditional | llegaría | llegarías | llegaría | llegaríamos | llegaríais | llegarían | |

Not just verbs either; gender, number, case complicate things

| Declension of | Declension of Kind | | | | | | | | | | |
|---------------|--------------------|------|-----------------------------|------|---------|--|--|--|--|--|--|
| | | | singular | | plural | | | | | | |
| | indef. | def. | noun | def. | noun | | | | | | |
| nominative | ein | das | Kind | die | Kinder | | | | | | |
| genitive | eines | des | Kindes, Kinds | der | Kinder | | | | | | |
| dative | einem | dem | Kind, Kinde ¹ | den | Kindern | | | | | | |
| accusative | ein | das | Kind | die | Kinder | | | | | | |

- Nominative: I/he/she, accusative: me/him/her, genitive: mine/his/hers
- Dative: merged with accusative in English, shows recipient of something I taught the children <=> Ich unterrichte die Kinder
 - I give the children a book <=> Ich gebe den Kindern ein Buch

Noun Inflection

Irregular Inflection

- Common words are often irregular I am / you are / she is
 - Je suis / tu es / elle est
 - Soy / está / es
- Less common words typically fall into some regular paradigm these are somewhat predictable

Agglutinating Langauges

 Finnish/Hungarian (Finno-Ugric), also Turkish: what a preposition would do in English is instead part of the verb (hug)

SYNTHESIS LECTURES ON HUMAN LANGUAGE TECHNOLOGIES

Graeme Hirst, Series Editor

Morphologically-Rich Languages

Great resources for challenging your assumptions about language and for understanding multilingual models!

Morphological Analysis/Inflection

Morphological Analysis: Hungarian

But the government does not recommend reducing taxes. Ám a kormány egyetlen adó csökkentését sem javasolja.

- Given a word in context, predict what its morphological features are
- Basic approach: combines two modules:
 - Lexicon: tells you what possibilities are for the word
 - Analyzer: statistical model that disambiguates
- Models are largely CRF-like: score morphological features in context
- Lots of work on Arabic analysis (high amounts of ambiguity)
- Inverse task of analysis: inflection

Morphological Analysis

Morphological Inflection

- inflection based on source side

она пыталась пересечь пути на ее велосипеде she had attempted to cross the road on her bike C8 C275 C37 C43 C82 C94 C331 TO VB DT NN IN PRP\$ NN

Machine translation where phrase table is defined in terms of lemmas "Translate-and-inflect": translate into uninflected words and predict

Chahuneau et al. (2013)

Chinese Word Segmentation

- Word segmentation: some languages including Chinese are totally untokenized
- LSTMs over character embeddings / character bigram embeddings to predict word boundaries
- Having the right segmentation can help machine translation

多少 冬天 (winter), 能 (can) 穿 (wear) (amount) 穿 (wear) 多少 (amount); 夏天 (summer), 能 (can) 穿 (wear) 多 (more) 少 (little) 穿 (wear) 多 (more) 少 (little)。 Without the word "夏天 (summer)" or "冬天 (winter)", it is difficult to segment the phrase "能 穿多少穿多少".

• separating nouns and pre-modifying adjectives: 高血压 (high blood pressure) \rightarrow 高(high) 血压(blood pressure)

• separating compound nouns: 内政部 (Department of Internal Affairs) \rightarrow 内政(Internal Affairs) 部(Department).

Cross-Lingual Tagging and Parsing

- Labeling POS datasets is expensive
- Can we transfer annotation from high-resource languages (English, etc.) to *low-resource* languages?

Cross-Lingual Tagging

Can we leverage word alignment here?

Tag with English tagger, project across bitext, train French tagger? Works pretty well

Cross-Lingual Tagging

Das and Petrov (2011)

- apply it to another language

Cross-Lingual Parsing

Now that we can POS tag other languages, can we parse them too?

Direct transfer: train a parser over POS sequences in one language, then

McDonald et al. (2011)

| | best-source | | avg-source | gold-POS | | pred-POS | |

- target language
- Multi-proj: more complex annotation projection approach

Cross-Lingual Parsing

Multi-dir: transfer a parser trained on several source treebanks to the

McDonald et al. (2011)

Cross-Lingual Word Representations

Multilingual Embeddings

Input: corpora in many languages. Output: embeddings where similar words in different languages have similar embeddings

I have an apple 47 24 18 427

J' ai des oranges 47 24 89 1981

MultiCluster: use bilingual dictionaries to form clusters of words that are translations of one another, replace corpora with cluster IDs, train "monolingual" embeddings over all these corpora

Works okay but not all that well

Ammar et al. (2016)

Multilingual Sentence Embeddings

- Form BPE vocabulary over all corpora (50k merges); will include characters from every script
- Take a bunch of bitexts and train an MT model between a bunch of language pairs with shared parameters, use W as sentence embeddings

Artetxe et al. (2019)

Multilingual Sentence Embeddings

Train a system for NLI (entailment/neutral/contradiction of a sentence pair) on English and evaluate on other languages

Artetxe et al. (2019)

- Take top 104 Wikipedias, train BERT on all of them simultaneously
- What does this look like?

Beethoven may have proposed unsuccessfully to Therese Malfatti, the supposed dedicatee of "Für Elise"; his status as a commoner may again have interfered with those plans.

- 当人们在马尔法蒂身后发现这部小曲的手稿时,便误认为上面写的是 "Für Elise"(即《给爱丽丝》)[51]。
- Кита́й (официально Кита́йская Наро́дная Респу́блика, сокращённо — КНР; кит. трад. 中華人民共和國, упр. 中华人民共和 国, пиньинь: Zhōnghuá Rénmín Gònghéguó, палл.: Чжунхуа Жэньминь Гунхэго) — государство в Восточной Аз

Multilingual BERT

Devlin et al. (2019)

| Fine-tuning \setminus Eval | EN | DE | NL | ES |
|------------------------------|-------|-------|-------|-------|
| EN | 90.70 | 69.74 | 77.36 | 73.59 |
| DE | 73.83 | 82.00 | 76.25 | 70.03 |
| NL | 65.46 | 65.68 | 89.86 | 72.10 |
| ES | 65.38 | 59.40 | 64.39 | 87.18 |

Table 1: NER F1 results on the CoNLL data.

Can transfer BERT directly across languages with some success

...but this evaluation is on languages that all share an alphabet

Multilingual BERT: Results

| Fine-tuning \setminus Eval | EN | DE | ES | IT |
|------------------------------|-------|-------|--------------|--------------|
| EN | 96.82 | 89.40 | 85.91 | 91.60 |
| DE | 83.99 | 93.99 | 86.32 | 88.39 |
| ES | 81.64 | 88.87 | 96.71 | 93.71 |
| IT | 86.79 | 87.82 | 91.28 | 98.11 |

Table 2: POS accuracy on a subset of UD languages.

Pires et al. (2019)

| | HI | UR | |
|----|------|-------------|--|
| HI | 97.1 | 85.9 | |
| UR | 91.1 | 93.8 | |

Table 4: POS accuracy on the UD test set for languages with different scripts. Row=fine-tuning, column=eval.

Urdu (Arabic/Nastaliq script) => Hindi (Devanagari). Transfers well despite different alphabets!

Japanese => English: different script and very different syntax

Multilingual BERT: Results

| | EN | BG | JA |
|----|-------------|-------------|------|
| EN | 96.8 | 87.1 | 49.4 |
| BG | 82.2 | 98.9 | 51.6 |
| JA | 57.4 | 67.2 | 96.5 |

Pires et al. (2019)

Figure 1: Amount of data in GiB (log-scale) for the 88 languages that appear in both the Wiki-100 corpus used for mBERT and XLM-100, and the CC-100 used for XLM-R. CC-100 increases the amount of data by several orders of magnitude, in particular for low-resource languages.

Larger "Common Crawl" dataset, better performance than mBERT

Low-resource languages benefit from training on other languages

High-resource languages see a small performance hit, but not much

Scaling Up: XLM-R

Conneau et al. (2019)

Scaling Up: Benchmarks

| Task | Corpus | Train | Dev | Test | Test sets | Lang. | Task |
|----------------|-------------------------------|-------------------|-----------------|------------------------------------|---|---------------------|---|
| Classification | XNLI PAWS-X | 392,702 49,401 | 2,490 2,000 | 5,010 2,000 | translations translations | 15 7 | NLI Paraphrase |

Clark et al. (2021)

- Train an mBERT-based typing model on Wikipedia data in English, Spanish, German and Finnish
- Achieves solid performance even on totally new languages like Japanese that don't share a character set with these

Cross-Lingual Typing

Sequence: 菊池は <u>アメリカ大リーグ</u> への参戦も 視野に進路が注目されていたが、10月25日に日 本のプロ野球に挑戦することを表明していた。…

Translation: Kikuchi was considering <u>Major League</u> Baseball as his next career, but he announced that he would play professional baseball in Japan ...

Predictions: baseball, established, establishments, in the united states, organizations, sports

Gold Types: baseball, baseball leagues in the united states, bodies, established, establishments, events, in canada, in the united states, major league baseball, multi-national professional sports leagues, organizations, professional, sporting, sports...

Precision: 100%

Recall: 31.6%

Selvaraj, Onoe, Durrett (2021)

- Universal dependencies: treebanks (+ tags) for 70+ languages
- Datasets in other languages are still small, so projection techniques may still help
- More corpora in other languages, less and less reliance on structured tools like parsers, and pretraining on unlabeled data means that performance on other languages is better than ever
- Multilingual models seem to be working better and better can even transfer to new languages "zero-shot". But still many challenges for lowresource settings

- challenges
- Problems: how to analyze rich morphology, how to generate with it
- Can leverage resources for English using bitexts
- between languages
- Next time: wrapup + discussion of ethics

Many languages have richer morphology than English and pose distinct

Multilingual models can be learned in a bitext-free way and can transfer
