# Ethics in NLP/AI

What can actually go wrong?

# Machine-learned NLP Systems

- Aggregate textual information to make predictions
- Hard to know why some predictions are made
- More and more widely use in various applications/sectors
- What are the risks here?
  - ...of certain applications?
    - ▶ IE / QA / summarization?
    - MT?
    - Dialog?
  - ...of machine-learned systems?
  - ...of deep learning specifically?

#### Broad Areas

Bias amplification: systems exacerbate real-world bias rather than correct for it

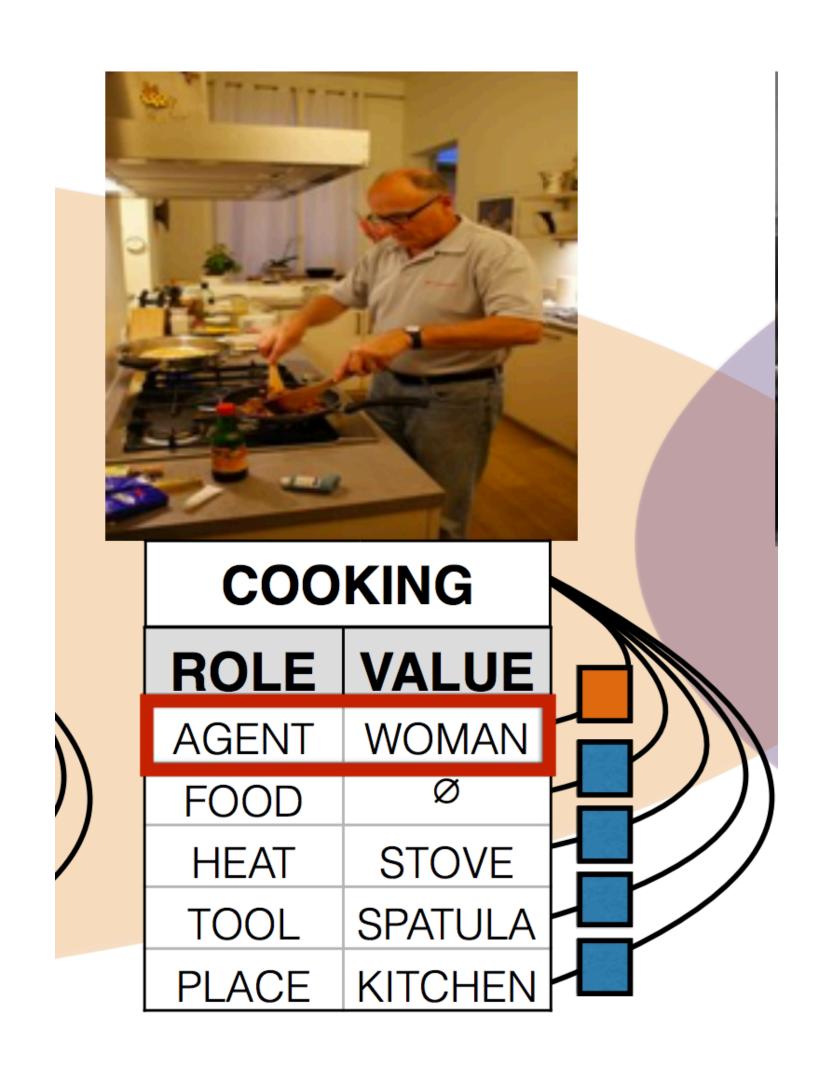

Exclusion: underprivileged users are left behind by systems

Dangers of automatic systems: automating things in ways we don't understand is dangerous

Unethical use: powerful systems can be used for bad ends

- ▶ Bias in data: 67% of training images involving cooking are women, model predicts 80% women cooking at test time — amplifies bias
- Can we constrain models to avoid this while achieving the same predictive accuracy?
- Place constraints on proportion of predictions that are men vs. women?

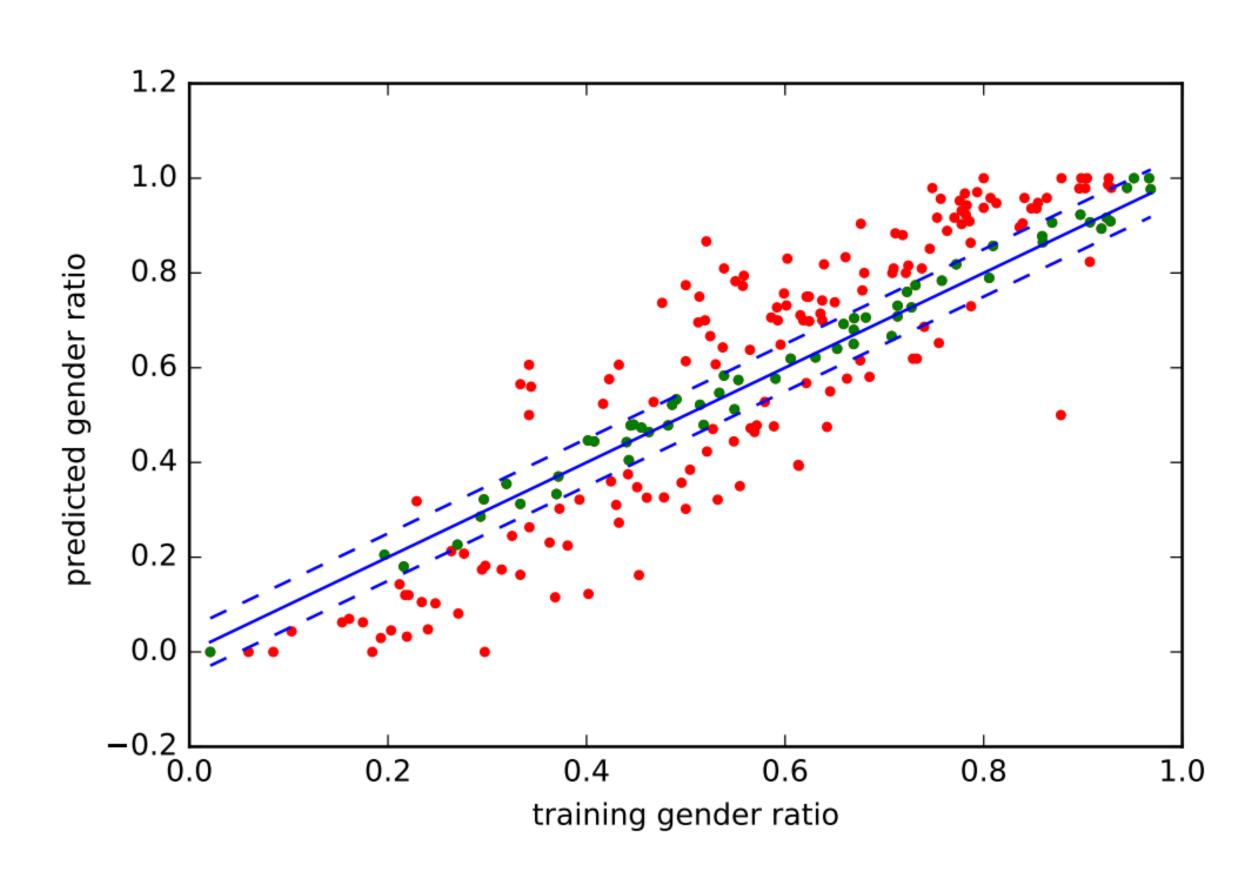

$$\max_{\{y^i\}\in\{Y^i\}} \sum_i f_\theta(y^i,i), \qquad \text{Maximize score of prediction} f(y,i) = \text{score of predicting } y$$
 s.t. 
$$A\sum_i y^i - b \leq 0, \quad \text{...subject to bias constraint}$$

Maximize score of predictions... f(y, i) = score of predicting y on ith example

Constraints: male prediction ratio on the test set has to be close to the ratio on the training set

$$b^* - \gamma \le \frac{\sum_{i} y_{v=v^*, r \in M}^{i}}{\sum_{i} y_{v=v^*, r \in W}^{i} + \sum_{i} y_{v=v^*, r \in M}^{i}} \le b^* + \gamma$$
(2)

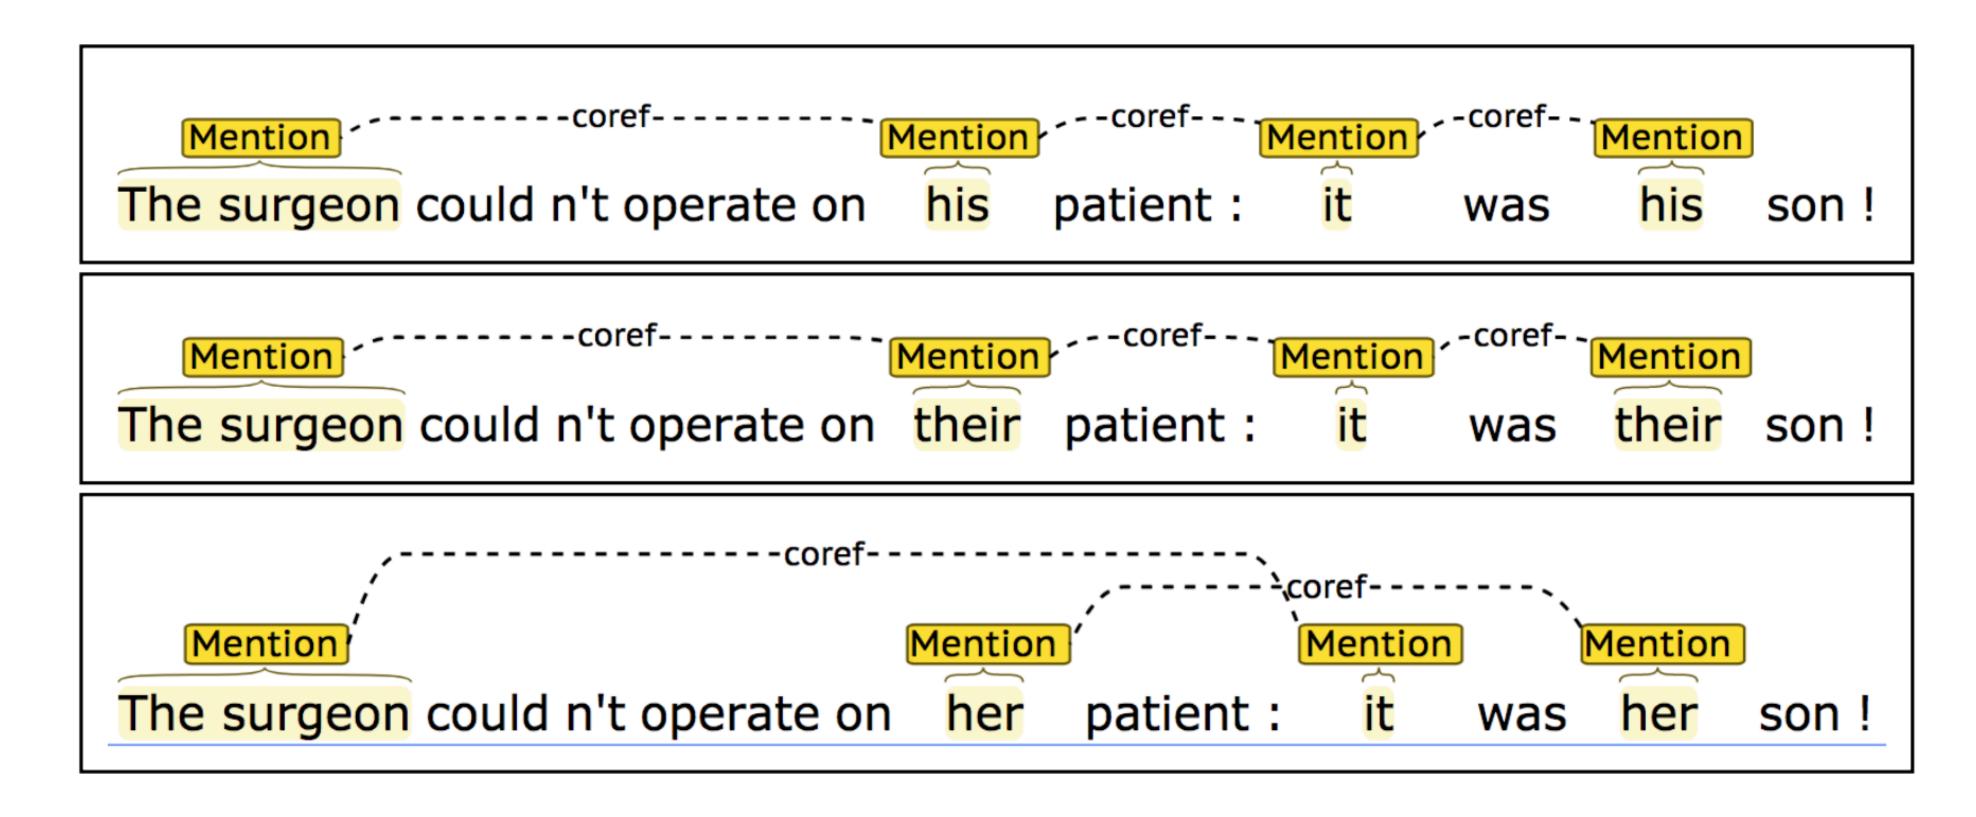

1.0 predicted gender ratio 0.8 -0.20.2 0.4 0.6 8.0 1.0 training gender ratio

(a) Bias analysis on imSitu vSRL without RBA

(c) Bias analysis on imSitu vSRL with RBA

 Coreference: models make assumptions about genders and make mistakes as a result

- (1a) The paramedic performed CPR on the passenger even though she/he/they knew it was too late.
- (2a) The paramedic performed CPR on the passenger even though she/he/they was/were already dead.
- (1b) The paramedic performed CPR on someone even though she/he/they knew it was too late.
- (2b) The paramedic performed CPR on someone even though she/he/they was/were already dead.
- Can form a targeted test set to investigate

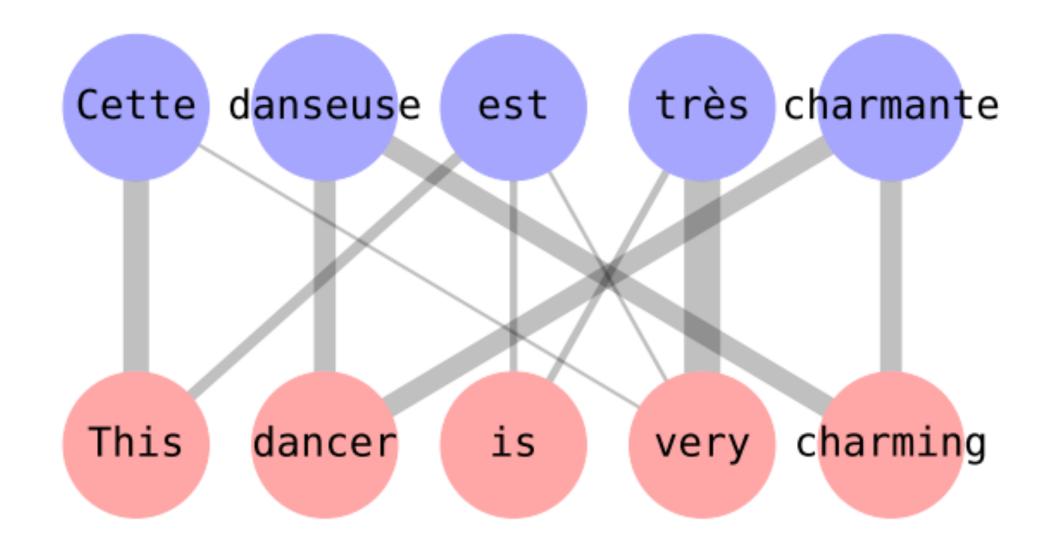

- Test set is balanced so a perfect model has female%-male% = 0 (black line)
- Neural models actually are a bit better at being unbiased, but are still skewed by data

- Harder to quantify this for machine translation
- "dancer" is assumed to be female in the context of the word "charming"... but maybe that reflects how language is used?

#### Exclusion

Most of our annotated data is English data, especially newswire

What about:

Dialects?

Other languages? (Non-European/CJK)

Codeswitching?

#### Translations of gay

#### adjective

homosexual	homosexual, gay, camp
alegre	cheerful, glad, joyful, happy, merry, gay
brillante vivo	bright, brilliant, shiny, shining, glowing, glistening live, alive, living, vivid, bright, lively
vistoso	colorful, ornate, flamboyant, colourful, gorgeous
jovial	jovial, cheerful, cheery, gay, friendly
gayo	merry, gay, showy
noun	
el homosexual	homosexual, gay, poof, queen, faggot, fagot > Offensive terms
el jovial	gay

Slide credit: <u>allout.org</u>

"Instead of relying on algorithms, which we can be accused of manipulating for our benefit, we have turned to machine learning, an ingenious way of disclaiming responsibility for anything. Machine learning is like money laundering for bias. It's a clean, mathematical apparatus that gives the status quo the aura of logical inevitability. The numbers don't lie."

- Maciej Cegłowski

Slide credit: Sam Bowman

- "Amazon scraps secret AI recruiting tool that showed bias against women"
  - "Women's X" organization was a negative-weight feature in resumes
  - Women's colleges too
- Was this a bad model? May have actually modeled downstream outcomes correctly...but this can mean learning humans' biases

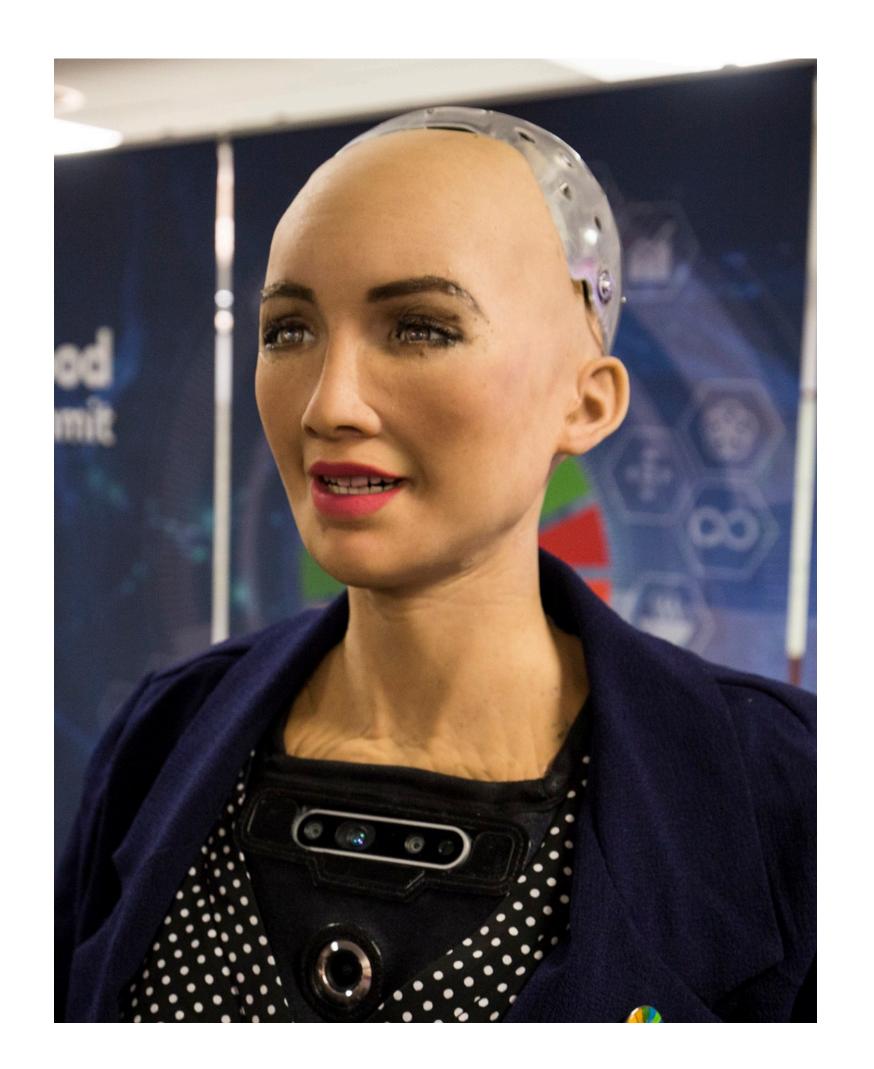

- Surveillance applications?
- Generating convincing fake news / fake comments?

#### **OUR CLASSIFIERS**

High IQ

Academic Researcher

Professional Poker Player

**Terrorist** 

Utilizing advanced machine learning techniques we developed and continue to evolve an array of classifiers. These classifiers represent a certain persona, with a unique personality type, a collection of personality traits or behaviors. Our algorithms can score an individual according to their fit to these classifiers.

### Final Thoughts

- You will face choices: what you choose to work on, what company you choose to work for, etc.
- Tech does not exist in a vacuum: you can work on problems that will fundamentally make the world a better place or a worse place (not always easy to tell)
- As AI becomes more powerful, think about what we *should* be doing with it to improve society, not just what we *can* do with it
