

Announcements

- AS due Tues
- FP out Tues, Will discuss in-class

Recap seq-to-seq MT

whole sentence crammed into a vector

ATTN:

$$\alpha^{(1)} = \text{softmax} \begin{bmatrix} h_1^{(e)} \cdot h_1^{(d)} \\ h_2^{(e)} \cdot h_1^{(d)} \\ \vdots \end{bmatrix}$$

$\frac{1 \cdot 1 \cdot 1 \cdot 1}{1 + 1 + 1 + 1}$

$$\bar{c}^{(1)} = \sum_{i=1}^n \alpha_i^{(1)} h_i^{(e)}$$

scalar

(not cell state)

Intuition

- "Residual connection" to input
- Learned end-to-end: extra power given to the model on top of RNN
- Coverage, copy source words

Today

(see slides)

- NMT systems, details (rare words)
- QA intro
- (if time) CCG parsing } not on FP

Past 3 wks: generation (LM, MT)

Next up: applications

QA Very broad area

① When was Samuel L. Jackson born?

Knowledge base QA / factoid QA

↳ KB, build query for the Q

② Who is Iron Man?

- ↳ open-ended, answer is a paragraph
- ↳ information retrieval + summarization (IR)

③ Who was the villain in Iron Man 1?

- ↳ middle ground: single phrase as answer, but probably not in our KB

- ↳ retrieve some text, answer from that
- ↳ IR + reading comprehension QA

ans
"Obadiah Stane ... serves as the main antagonist in Iron Man."

Today: #1 KBQA

Tues / FP: #3 Reading comprehension

Knowledge base

KBQA Two steps:

- ① Convert Q to a formal semantic representation
- ② Execute that representation against KB

KB: database

name	bday	starsIn
Samuel LJ	12/21/48	Pulp Fiction, Captain Marvel
Brie Larson	10/1/89	Captain Marvel, Scott Pilgrim...

When was SLJ born?

list of rows
↓

$\text{map}(\lambda v = r.\text{bday}, \text{filter}(\lambda r : r.\text{name} = \text{SLJ}, \text{DB}))$
 $\Rightarrow \text{List}(12/21/48)$

Semantic parsing: map {questions, statements}
into logical forms

Logical forms are expressions most typically in lambda calculus

When was SLT born?

↳ lambda calculus: $\lambda d. \text{bday}(\text{SLT}, d)$

(similar to the Python lambdas we wrote down)

Reduce KBQA to a semantic parsing problem
map language \Rightarrow lambda calculus

What movies did Brie Larson star in?
act in?

$\lambda m. \text{movie}(m) \wedge \underline{\text{starsIn}}(BL, m)$

predicate in our KB

How we do this: CCG parsing
