

In this assignment, you will use MPI to implement the **sparse matrix-vector multiplication** algorithm of your choice. For this assignment, there is just a single deadline (11:59pm on the due date). We have also changed the ground rules for timing your solutions, which will be made available on Piazza. (Until these rules are available, it's sufficient to know that they're similar to what we had discussed in class.)

Finally, please also comment on the differences between your MPI and Pthreads solutions (along as many dimensions as you wish).
