## A Small Satisfiability (SAT) Problem

$$\begin{aligned} & (x_5 \vee x_8 \vee \bar{x}_2) \wedge (x_2 \vee \bar{x}_1 \vee \bar{x}_3) \wedge (\bar{x}_8 \vee \bar{x}_3 \vee \bar{x}_7) \wedge (\bar{x}_5 \vee x_3 \vee x_8) \wedge \\ & (\bar{x}_6 \vee \bar{x}_1 \vee \bar{x}_5) \wedge (x_8 \vee \bar{x}_9 \vee x_3) \wedge (x_2 \vee x_1 \vee x_3) \wedge (\bar{x}_1 \vee x_8 \vee x_4) \wedge \\ & (\bar{x}_9 \vee \bar{x}_6 \vee x_8) \wedge (x_8 \vee x_3 \vee \bar{x}_9) \wedge (x_9 \vee \bar{x}_3 \vee x_8) \wedge (x_6 \vee \bar{x}_9 \vee x_5) \wedge \\ & (x_2 \vee \bar{x}_3 \vee \bar{x}_8) \wedge (x_8 \vee \bar{x}_6 \vee \bar{x}_3) \wedge (x_8 \vee \bar{x}_3 \vee \bar{x}_1) \wedge (\bar{x}_8 \vee x_6 \vee \bar{x}_2) \wedge \\ & (x_7 \vee x_9 \vee \bar{x}_2) \wedge (x_8 \vee \bar{x}_9 \vee x_2) \wedge (\bar{x}_1 \vee \bar{x}_9 \vee x_4) \wedge (x_8 \vee x_1 \vee \bar{x}_2) \wedge \\ & (x_3 \vee \bar{x}_4 \vee \bar{x}_6) \wedge (\bar{x}_1 \vee \bar{x}_7 \vee x_5) \wedge (\bar{x}_7 \vee x_1 \vee x_6) \wedge (\bar{x}_5 \vee x_4 \vee \bar{x}_6) \wedge \\ & (\bar{x}_4 \vee x_9 \vee \bar{x}_8) \wedge (x_2 \vee x_9 \vee x_1) \wedge (x_5 \vee \bar{x}_7 \vee x_1) \wedge (\bar{x}_7 \vee \bar{x}_9 \vee \bar{x}_6) \wedge \\ & (x_2 \vee x_5 \vee x_4) \wedge (x_8 \vee \bar{x}_4 \vee x_5) \wedge (x_5 \vee x_9 \vee x_3) \wedge (\bar{x}_5 \vee \bar{x}_7 \vee x_9) \wedge \\ & (x_2 \vee \bar{x}_8 \vee x_1) \wedge (\bar{x}_7 \vee x_1 \vee x_5) \wedge (x_1 \vee x_4 \vee x_3) \wedge (x_1 \vee \bar{x}_9 \vee \bar{x}_4) \wedge \\ & (x_3 \vee x_5 \vee x_6) \wedge (\bar{x}_6 \vee x_3 \vee \bar{x}_9) \wedge (\bar{x}_7 \vee x_5 \vee x_9) \wedge (x_7 \vee \bar{x}_5 \vee \bar{x}_2) \wedge \\ & (x_4 \vee x_7 \vee x_3) \wedge (x_4 \vee \bar{x}_9 \vee \bar{x}_7) \wedge (x_5 \vee \bar{x}_1 \vee x_7) \wedge (x_5 \vee \bar{x}_1 \vee x_7) \wedge \\ & (x_6 \vee x_7 \vee \bar{x}_3) \wedge (\bar{x}_8 \vee \bar{x}_6 \vee \bar{x}_7) \wedge (x_6 \vee x_2 \vee x_3) \wedge (\bar{x}_8 \vee x_2 \vee x_5) \end{aligned}$$

Does there exist an assignment satisfying all clauses?

# Search for a satisfying assignment (or proof none exists)

$$\begin{aligned} & (x_5 \vee x_8 \vee \bar{x}_2) \wedge (x_2 \vee \bar{x}_1 \vee \bar{x}_3) \wedge (\bar{x}_8 \vee \bar{x}_3 \vee \bar{x}_7) \wedge (\bar{x}_5 \vee x_3 \vee x_8) \wedge \\ & (\bar{x}_6 \vee \bar{x}_1 \vee \bar{x}_5) \wedge (x_8 \vee \bar{x}_9 \vee x_3) \wedge (x_2 \vee x_1 \vee x_3) \wedge (\bar{x}_1 \vee x_8 \vee x_4) \wedge \\ & (\bar{x}_9 \vee \bar{x}_6 \vee x_8) \wedge (x_8 \vee x_3 \vee \bar{x}_9) \wedge (x_9 \vee \bar{x}_3 \vee x_8) \wedge (x_6 \vee \bar{x}_9 \vee x_5) \wedge \\ & (x_2 \vee \bar{x}_3 \vee \bar{x}_8) \wedge (x_8 \vee \bar{x}_6 \vee \bar{x}_3) \wedge (x_8 \vee \bar{x}_3 \vee \bar{x}_1) \wedge (\bar{x}_8 \vee x_6 \vee \bar{x}_2) \wedge \\ & (x_7 \vee x_9 \vee \bar{x}_2) \wedge (x_8 \vee \bar{x}_9 \vee x_2) \wedge (\bar{x}_1 \vee \bar{x}_9 \vee x_4) \wedge (x_8 \vee x_1 \vee \bar{x}_2) \wedge \\ & (x_3 \vee \bar{x}_4 \vee \bar{x}_6) \wedge (\bar{x}_1 \vee \bar{x}_7 \vee x_5) \wedge (\bar{x}_7 \vee x_1 \vee x_6) \wedge (\bar{x}_5 \vee x_4 \vee \bar{x}_6) \wedge \\ & (\bar{x}_4 \vee x_9 \vee \bar{x}_8) \wedge (x_2 \vee x_9 \vee x_1) \wedge (x_5 \vee \bar{x}_7 \vee x_1) \wedge (\bar{x}_7 \vee \bar{x}_9 \vee \bar{x}_6) \wedge \\ & (x_2 \vee x_5 \vee x_4) \wedge (x_8 \vee \bar{x}_4 \vee x_5) \wedge (x_5 \vee x_9 \vee x_3) \wedge (\bar{x}_5 \vee \bar{x}_7 \vee x_9) \wedge \\ & (x_2 \vee \bar{x}_8 \vee x_1) \wedge (\bar{x}_7 \vee x_1 \vee x_5) \wedge (x_1 \vee x_4 \vee x_3) \wedge (x_1 \vee \bar{x}_9 \vee \bar{x}_4) \wedge \\ & (x_3 \vee x_5 \vee x_6) \wedge (\bar{x}_6 \vee x_3 \vee \bar{x}_9) \wedge (\bar{x}_7 \vee x_5 \vee x_9) \wedge (x_7 \vee \bar{x}_5 \vee \bar{x}_2) \wedge \\ & (x_4 \vee x_7 \vee x_3) \wedge (x_4 \vee \bar{x}_9 \vee \bar{x}_7) \wedge (x_5 \vee \bar{x}_1 \vee x_7) \wedge (x_5 \vee \bar{x}_1 \vee x_7) \wedge \\ & (x_6 \vee x_7 \vee \bar{x}_3) \wedge (\bar{x}_8 \vee \bar{x}_6 \vee \bar{x}_7) \wedge (x_6 \vee x_2 \vee x_3) \wedge (\bar{x}_8 \vee x_2 \vee x_5) \end{aligned}$$

Solutions are easy to **verify**, but what about **unsatisfiability**?

# Motivation for validating unsatisfiability proofs

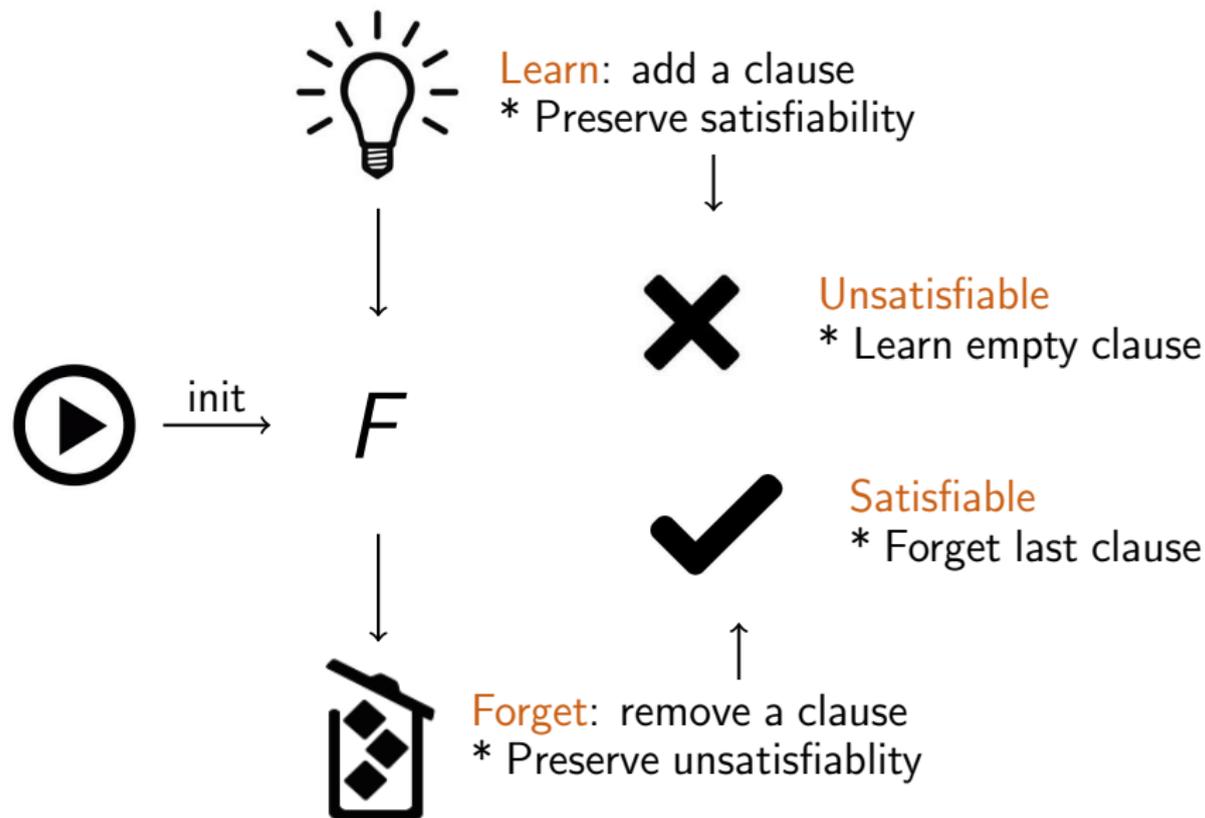

Satisfiability solvers are used in amazing ways...

- ▶ Hardware and software verification (Intel and Microsoft)
- ▶ Hard-Combinatorial problems:
  - ▶ van der Waerden numbers  
[Dransfield, Marek, and Truszczynski, 2004; Kouril and Paul, 2008]
  - ▶ Gardens of Eden in Conway's Game of Life  
[Hartman, Heule, Kwekkeboom, and Noels, 2013]
  - ▶ Erdős Discrepancy Problem [Konev and Lisitsa, 2014]

..., but satisfiability solvers have errors and only return yes/no.

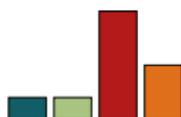

- ▶ Documented bugs in SAT, SMT, and QBF solvers  
[Brummayer and Biere, 2009; Brummayer et al., 2010]
- ▶ Implementation errors often imply conceptual errors
- ▶ Mathematical results require a stronger justification than a simple yes/no by a solver. UNSAT must be checkable.

# Solving Framework for Hard-Combinatorial Problems

# Overview of Solving Framework

## Case Study: Pythagorean Triples Problem [Graham 1980]

Can the set of natural numbers  $\{1, 2, 3, \dots\}$  be partitioned into two parts such that no part contains a Pythagorean triple  $(a, b, c \in \mathbb{N}$  with  $a^2 + b^2 = c^2$ )?

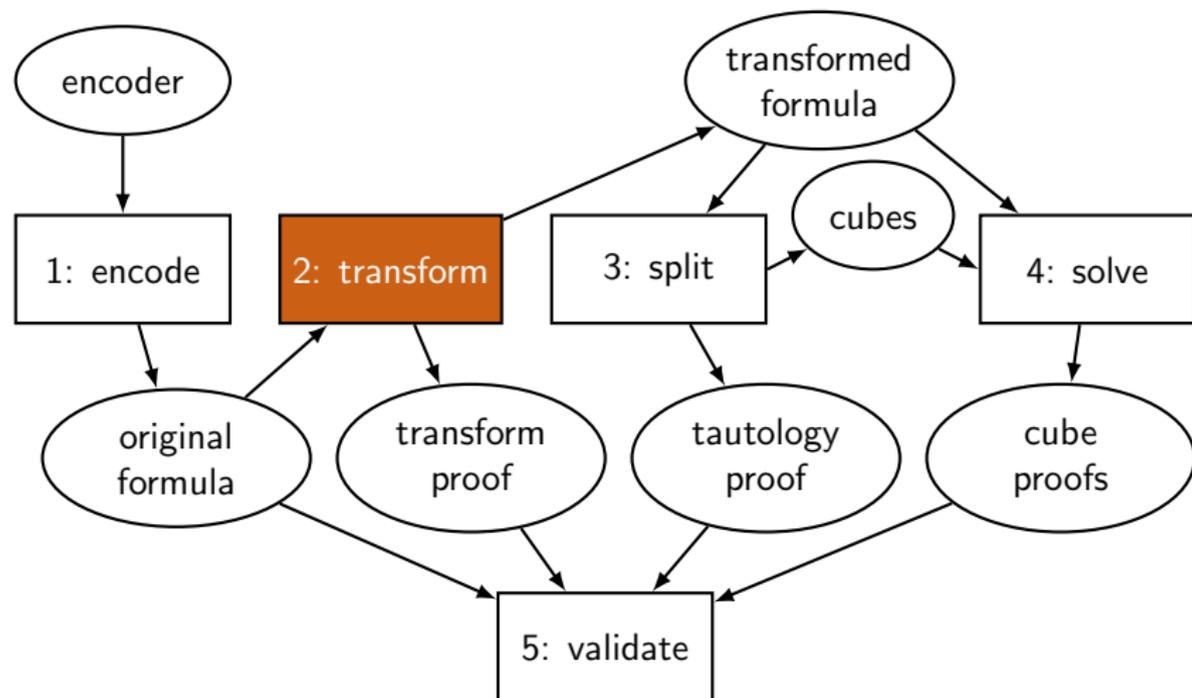

A computer program can partition the first several thousands numbers  $(\{1, \dots, 7664\})$  [Cooper and Overstreet 2015].

A partition into two parts is encoded using Boolean variables  $x_i$  with  $i \in \{1, 2, 3, \dots, n\}$  such that  $x_i = 1$  ( $= 0$ ) means that  $i$  occurs in Part 1 (Part 2). For each Pythagorean triple  $(a, b, c)$  two clauses are added:  $(x_a \vee x_b \vee x_c) \wedge (\bar{x}_a \vee \bar{x}_b \vee \bar{x}_c)$ .

**Theorem (Main result via parallel SAT solving)**

*$[1, 7824]$  can be partitioned into two parts, such that no part contains a Pythagorean triple. This is impossible for  $[1, 7825]$ .*

## Highlight: Phase 2

## Phase 2: Transform

Input: original CNF formula

Output: transformed CNF formula and a transformation proof

Goal: optimize the formula regarding the later (solving) phases

We applied two transformations (realized via **blocked clauses**):

- ▶ **Pythagorean Triple Elimination** removes Pythagorean Triples that contain an element that does not occur in any other Pythagorean Triple, e.g.  $3^2 + 4^2 = 5^2$ . (till fixpoint)
- ▶ **Symmetry breaking** places the number most frequently occurring in Pythagorean triples (2520) in Part 1 (encode).

All transformation (pre-processing) techniques can be expressed using RAT steps [Järvisalo, Heule, and Biere 2012].

## Phase 2: Blocked Clauses [Kullmann'99]

### Definition (Blocking literal)

A literal  $l$  in a clause  $C$  of a CNF  $F$  blocks  $C$  w.r.t.  $F$  if for every clause  $D \in F_{\bar{l}}$ , the resolvent  $(C \setminus \{l\}) \cup (D \setminus \{\bar{l}\})$  obtained from resolving  $C$  and  $D$  on  $l$  is a tautology.

With respect to a fixed CNF and its clauses we have:

### Definition (Blocked clause)

A clause is blocked if it contains a literal that blocks it.

## Phase 2: Blocked Clauses [Kullmann'99]

### Definition (Blocking literal)

A literal  $l$  in a clause  $C$  of a CNF  $F$  blocks  $C$  w.r.t.  $F$  if for every clause  $D \in F_{\bar{l}}$ , the resolvent  $(C \setminus \{l\}) \cup (D \setminus \{\bar{l}\})$  obtained from resolving  $C$  and  $D$  on  $l$  is a tautology.

With respect to a fixed CNF and its clauses we have:

### Definition (Blocked clause)

A clause is blocked if it contains a literal that blocks it.

### Example (Blocking literals and blocked clauses)

Consider the formula  $(a \vee b) \wedge (a \vee \bar{b} \vee \bar{c}) \wedge (\bar{a} \vee c)$ .

First clause is not blocked.

Second clause is blocked by both  $a$  and  $\bar{c}$ .

Third clause is blocked by  $c$ .

## Phase 2: Blocked Clauses [Kullmann'99]

### Definition (Blocking literal)

A literal  $l$  in a clause  $C$  of a CNF  $F$  blocks  $C$  w.r.t.  $F$  if for every clause  $D \in F_{\bar{l}}$ , the resolvent  $(C \setminus \{l\}) \cup (D \setminus \{\bar{l}\})$  obtained from resolving  $C$  and  $D$  on  $l$  is a tautology.

With respect to a fixed CNF and its clauses we have:

### Definition (Blocked clause)

A clause is blocked if it contains a literal that blocks it.

### Example (Blocking literals and blocked clauses)

Consider the formula  $(a \vee b) \wedge (a \vee \bar{b} \vee \bar{c}) \wedge (\bar{a} \vee c)$ .

First clause is not blocked.

Second clause is blocked by both  $a$  and  $\bar{c}$ .

Third clause is blocked by  $c$ .

### Proposition

Removal of an arbitrary blocked clause preserves unsatisfiability.

## Phase 2: Blocked Clause Elimination (BCE)

### Definition (BCE)

While a clause  $C$  in a formula  $F$  is blocked, remove  $C$  from  $F$ .

### Example (BCE)

Consider  $(a \vee b) \wedge (a \vee \bar{b} \vee \bar{c}) \wedge (\bar{a} \vee c)$ .

After removing either  $(a \vee \bar{b} \vee \bar{c})$  or  $(\bar{a} \vee c)$ , the clause  $(a \vee b)$  becomes blocked (*no clause* with either  $\bar{b}$  or  $\bar{a}$ ).

An extreme case in which BCE removes all clauses!

### Example (Pythagorean Triples)

The clauses  $(x_3 \vee x_4 \vee x_5)$  and  $(\bar{x}_3 \vee \bar{x}_4 \vee \bar{x}_5)$  are blocked in  $F_{7824}$  and  $F_{7825}$  (actually in any  $F_n$ ).

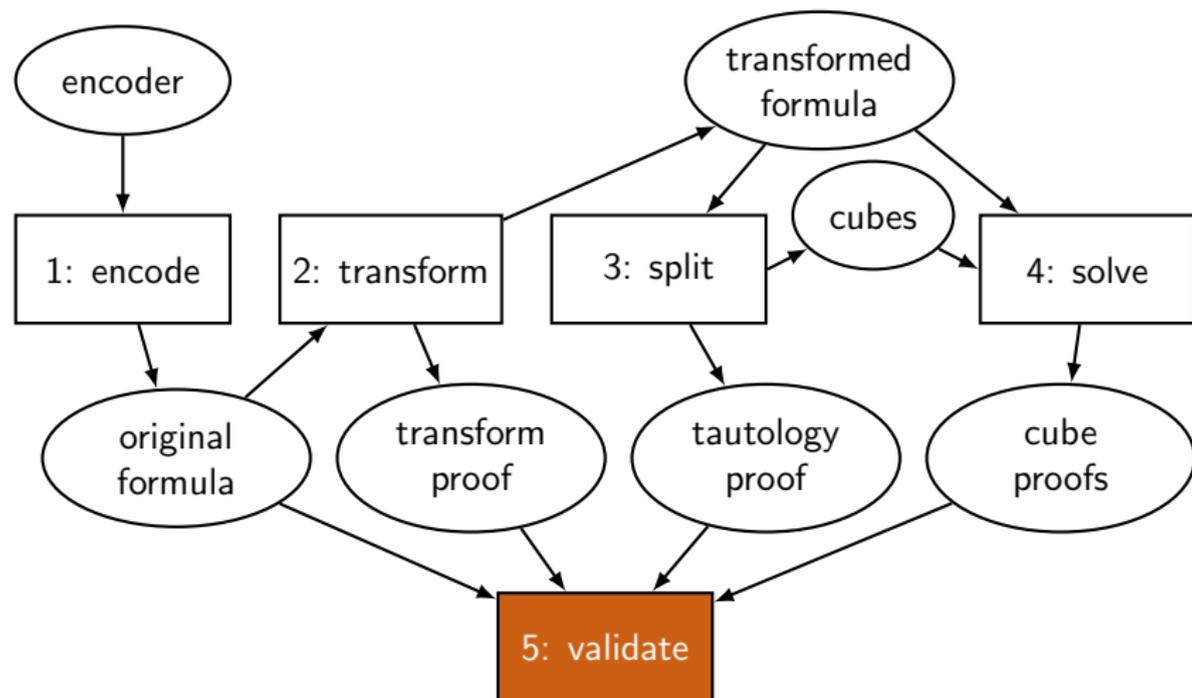

BCE ( $F_{7824}$ ) has 3740 variables and 14652 clauses, and

BCE ( $F_{7825}$ ) has 3745 variables and 14672 clauses.

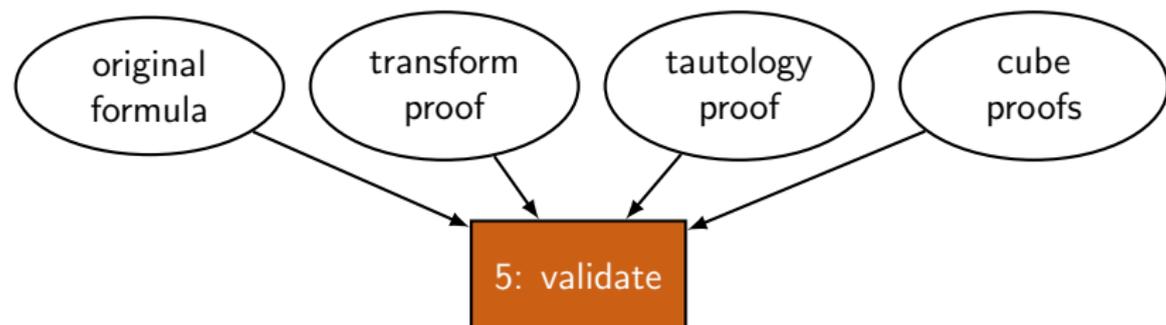

BCE can simulate many high-level reasoning techniques.

[Järvisalo, Biere, and Heule 2010]

## Highlight: Phase 5

## Phase 5: Validate Pythagorean Triples Proofs.

We check the proofs with the **DRAT-trim** checker, which has been used to validate the UNSAT results of the international SAT Competitions since 2013.

Recently it was shown how to validate DRAT proofs in parallel [Heule and Biere 2015].

The size of the merged proof is almost 200 terabyte and has been validated in 16,000 CPU hours.

# The Future: Verified SAT via Proofs

## Next Step: Verify the Proof Checker

Since 2013 **all** results of the SAT Competitions are validated.  
The main question asked: can you **verify the checker**?

The verified RAT checker [Wetzler, Heule, and Hunt 2013] is too slow for practical use (say  $1000\times$  slower compared to C).

The ACL2 theorem prover allows implementing (and verifying) a checker that is **only about 60% slower compared to C**.

Nathan Wetzler started to work on this during his PhD thesis, but still quite some work is required.

## Second Next Step: Verified SAT Solving

Question: Would it be possible to implement a **fast mechanically-verified** SAT solver?

SAT solvers are constantly being improved using a vast amount of complex techniques making mechanical verification hard.

However, given a fast mechanically-verified proof checker, SAT solver implementations do not have to be verified.

SAT solver can simply be used as an **oracle** to produce proofs.

## Future: Combining it all to have proofs for hard problems

Next steps in verified SAT solving:

- ▶ Develop a fast mechanically-verified, clausal proof checker;
- ▶ Implement a fast, proof-producing SAT solving in ACL2.

Integrate the solving framework in a theorem prover:

- ▶ Show that the encoding of problems into SAT is correct;
- ▶ Show the correctness of clausal proof decomposition.

Apply our solving framework to various hard problems:

- ▶ Obtain and verify a proof for Radziszowski's and McKay's big result [1995] in Ramsey Theory:  $R(4, 5) = 25$ ;
- ▶ Century-old open problems appear solvable now, such as Schur number  $S(5)$ .

## Future: Combining it all to have proofs for hard problems

Next steps in verified SAT solving:

- ▶ Develop a fast mechanically-verified, clausal proof checker;
- ▶ Implement a fast, proof-producing SAT solving in ACL2.

Integrate the solving framework in a theorem prover:

- ▶ Show that the encoding of problems into SAT is correct;
- ▶ Show the correctness of clausal proof decomposition.

Apply our solving framework to various hard problems:
