Task: Tidy Home

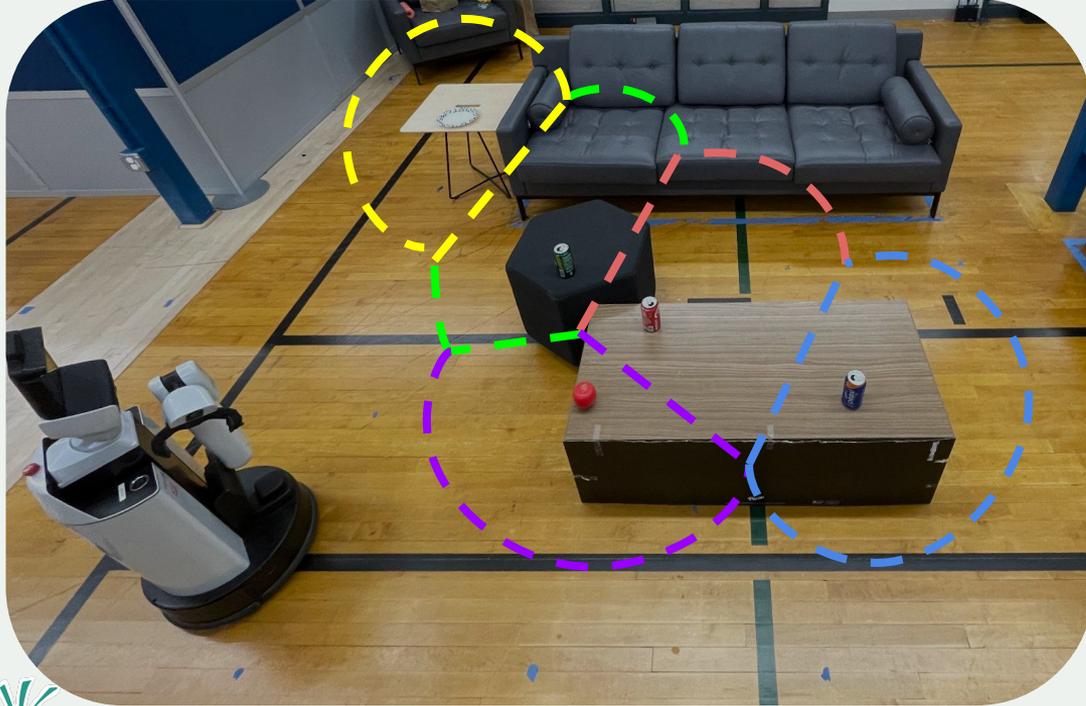

Collected (green_can)

Collected (red_can)

Collected (blue_can)

On (apple, plate)

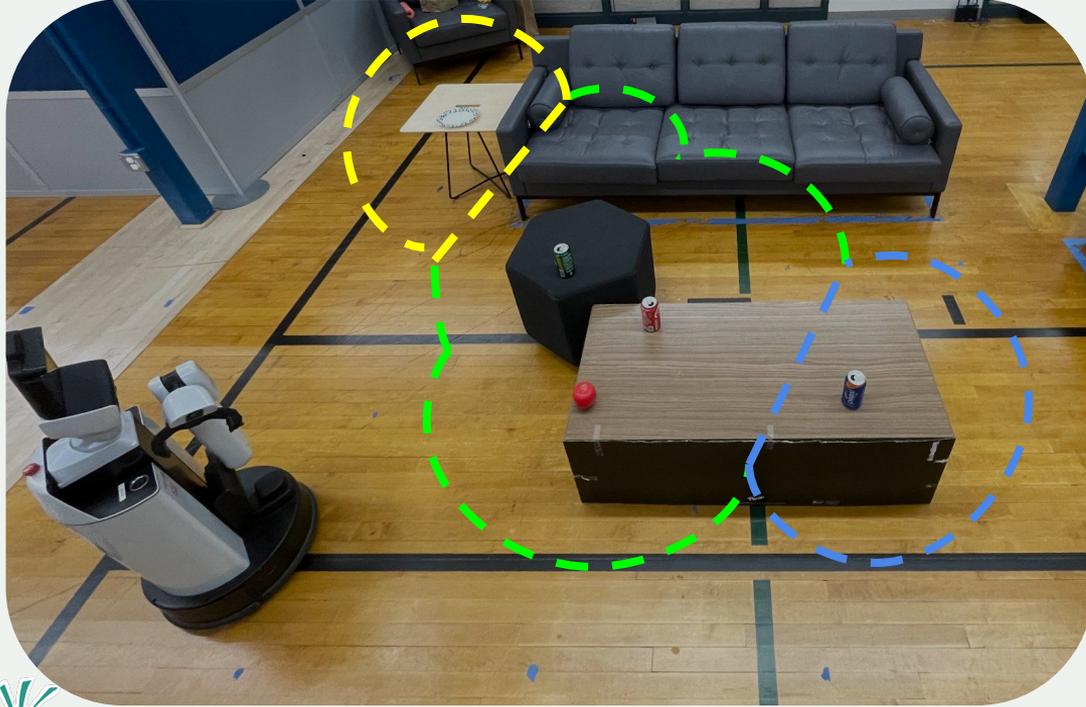

Task Planner:
LOCATION (**green_can**)
LOCATION (**apple**)
LOCATION (**plate**)
LOCATION (**blue_can**)
LOCATION (**red_can**)

Previous Task and Motion Planning (TAMP) methods assume predefined symbolic locations

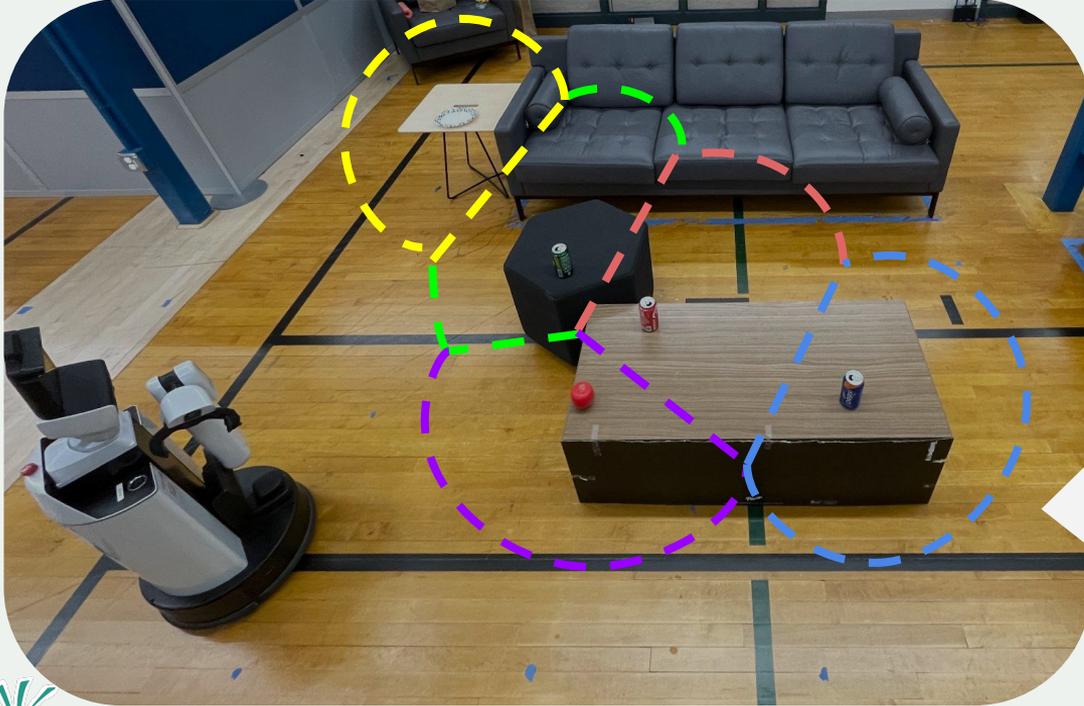

Task Planner:
LOCATION (green_can,
red_can, apple)
LOCATION (plate)
LOCATION (blue_can)

Focus: optimize abstracted locations and their geometric groundings

Previous Work:

goto (**green_can**)

collect (green_can)

goto (**apple**)

pickup (apple)

goto (**plate**)

placeon (apple, plate)

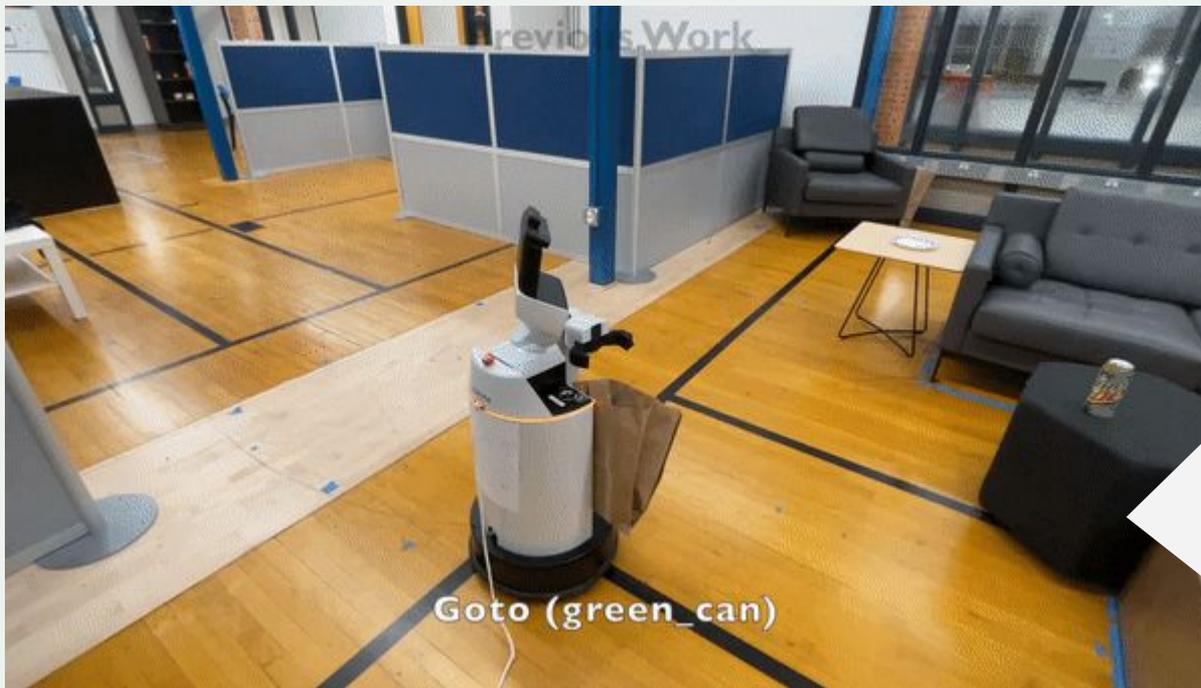

goto (**blue_can**)

collect (blue_can)

goto (**red_can**)

collect (red_can)

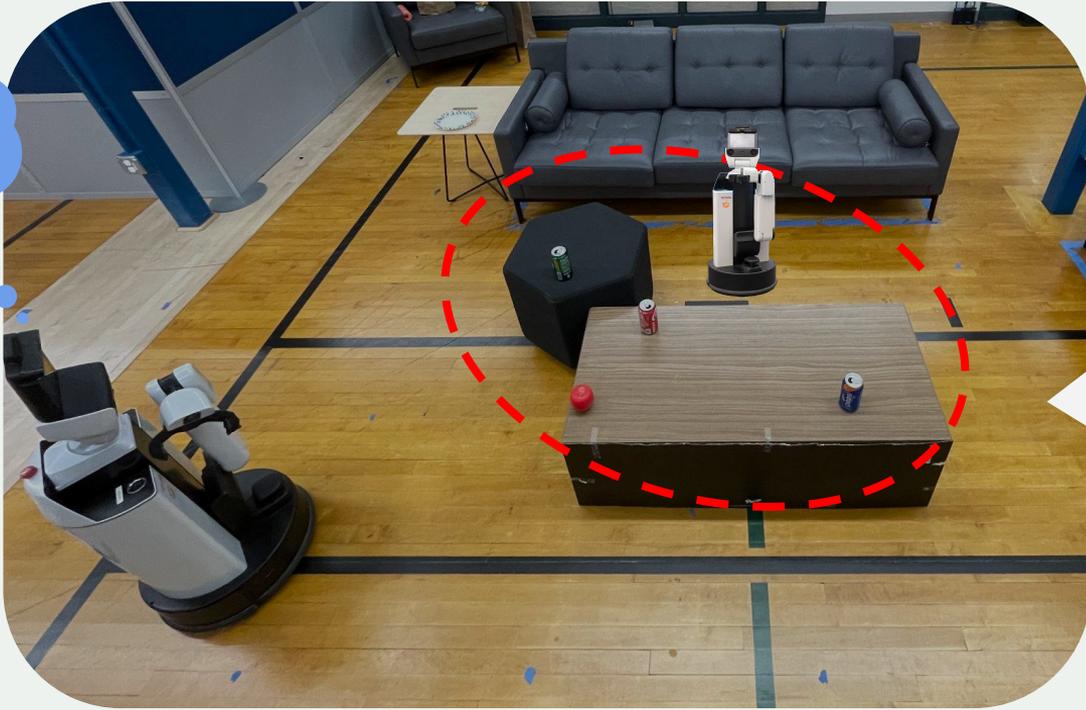

Previous Work:
goto (**green_can**)
collect (green_can)
goto (**apple**)
pickup (apple)
goto (**plate**)
placeon (apple, plate)
goto (**blue_can**)
collect (blue_can)
goto (**red_can**)
collect (red_can)

Feasibility

Efficiency

goto (apple, green_can,
red_can, blue_can)

collect (green_can)

collect (blue_can)

collect (red_can)

pickup (apple)

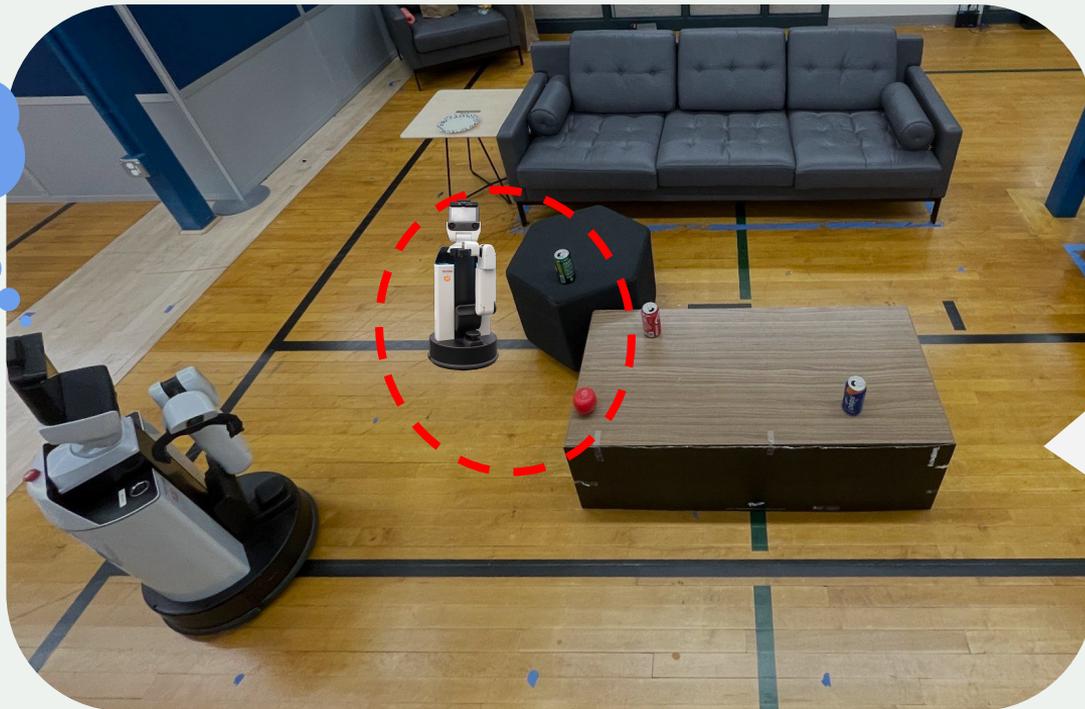

goto (plate)

placeon (apple, plate)

Feasibility

Efficiency

goto (**green_can**, **apple**)

collect (green_can)

pickup (apple)

goto (**plate**)

placeon (apple, plate)

goto (**blue_can**)

collect (blue_can)

goto (**red_can**)

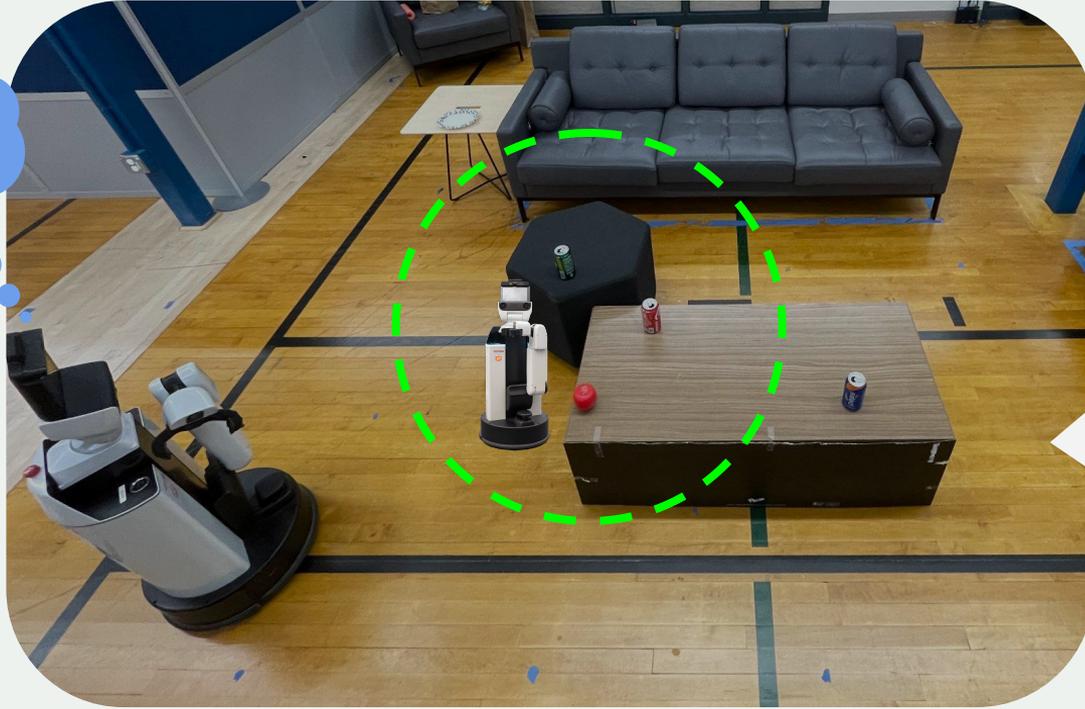

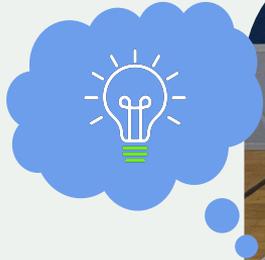

collect (red_can)

Feasibility

Efficiency

```
goto (green_can, red_can,  
      apple)
```

```
collect (green_can)
```

```
collect (red_can)
```

```
pickup (apple)
```

```
goto (plate)
```

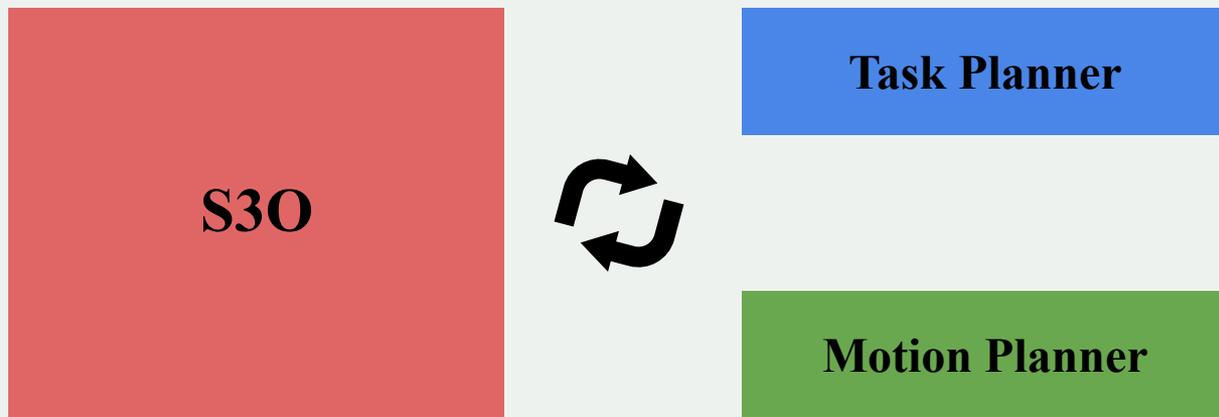

```
placeon (apple, plate)
```

```
goto (blue_can)
```

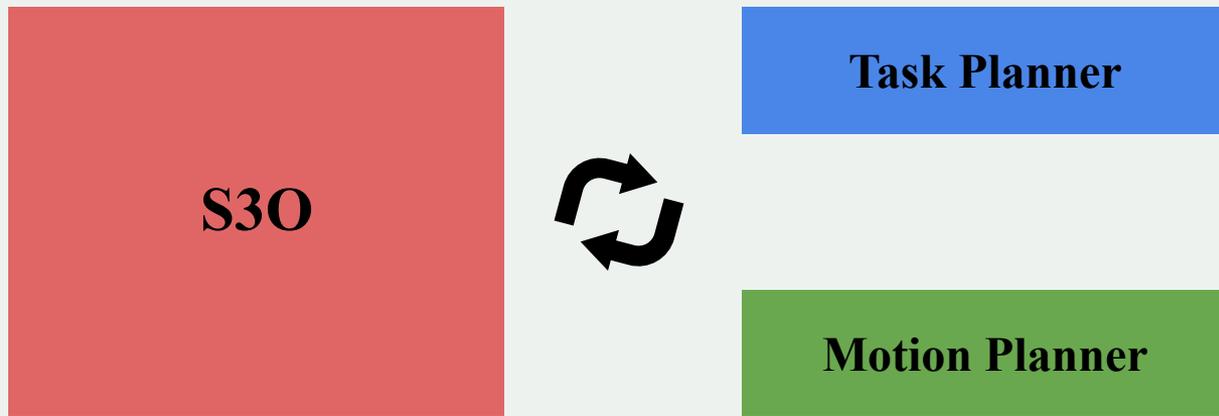

```
collect (blue_can)
```

Symbolic State Space Optimization (S3O)

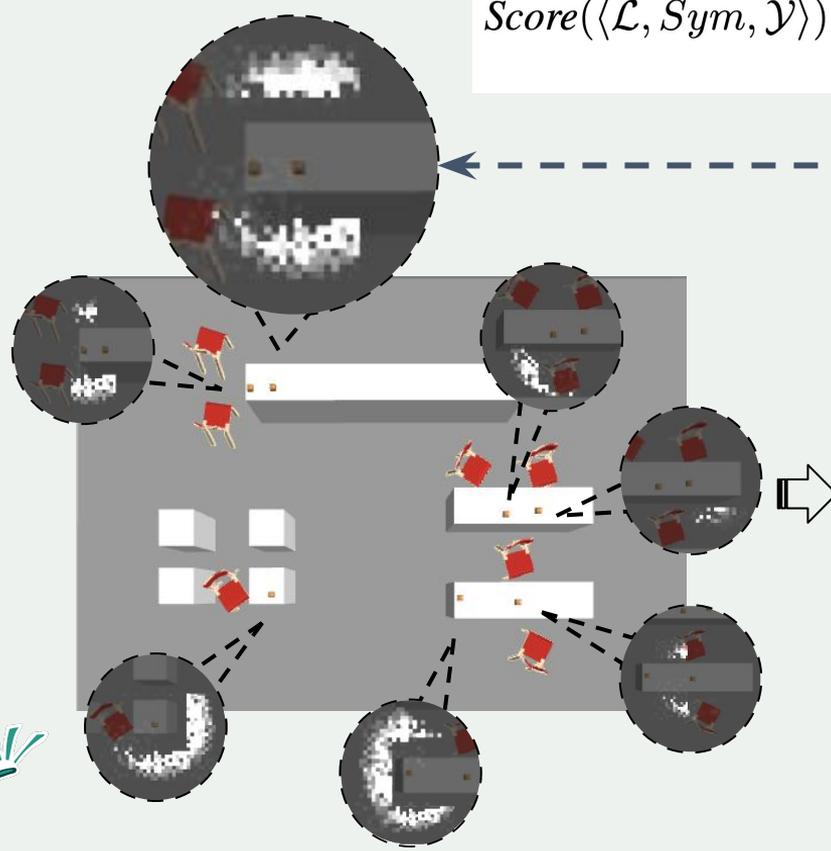

Symbolic State Space Optimization (S3O)

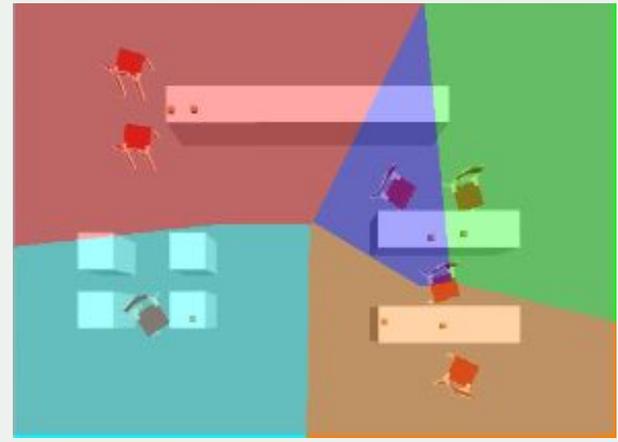

Challenge: How to reduce search complexity?

$$\text{Score}(\langle \mathcal{L}, \text{Sym}, \mathcal{Y} \rangle) = \sum_{o \in \mathcal{O}} \text{Fea}^t(l, o), \text{ if at } (o, l)$$

A Top-ranked State Space

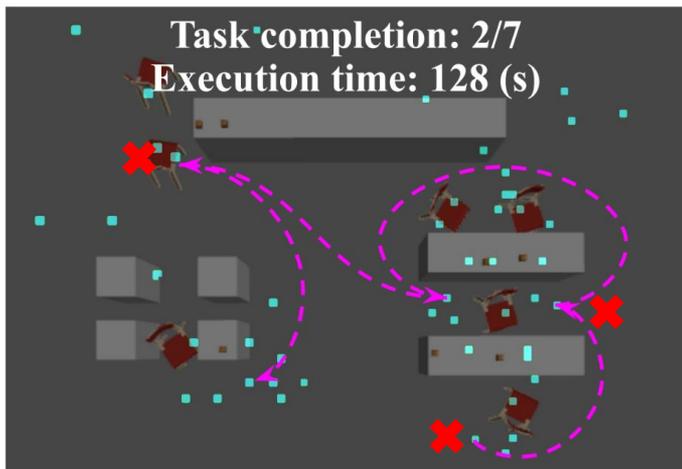

Sampled Robot Pose

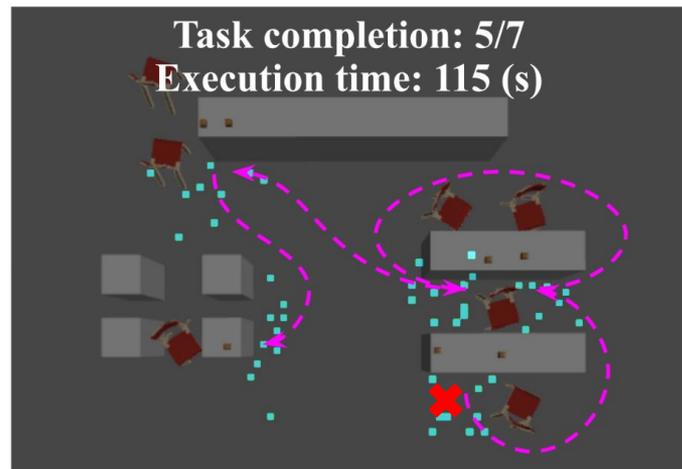

Failed Manipulation

Robot Trajectory

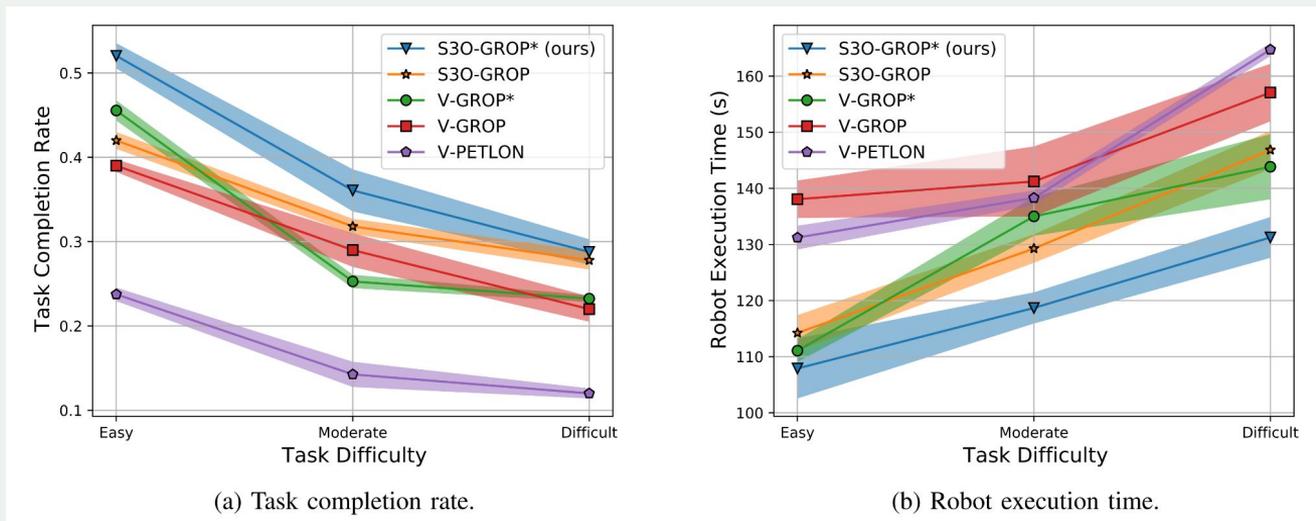

CMA-ES Early Iteration

CMA-ES Late Iteration

Results

S3O produced the highest task completion rate while maintaining the lowest robot execution time.

This observation is consistent over tasks of different difficulties.
