Welcome to CS 314!
Your TA (me!)

- Skyler Vestal
- CS Senior ('23)
- Completed a lot of stuff. Ask if you have questions about other CS/Math topics!
- Interned at Zillow this summer!
- skylervestal@utexas.edu
Also me!

- #1 Brewers Fan!
- #1 City Girl Fan!
- Rollerblading … Everywhere
- Learning Japanese (N3-ish)
- Windows & Linux
- VS Code Simp
Some links!

- My Website
Discussion Section Name
1. A method is $O(2^N)$. It takes 1 second for the method to complete when $N = 50$.

What is the expected time in seconds for the method to complete when $N = 54$?

\[
\frac{2^{54}}{2^{50}} = \frac{x}{1}
\]
2. A method is \( O(N^2 \log_2 N) \). It takes 20 seconds for the method to complete when \( N = 1,000,000 \).

What is the expected time in seconds for the method to complete when \( N = 2,000,000 \)?

\[
\frac{2 \log_2 (2 \times 10^6)}{\log_2 (1 \times 10^6)} = \frac{x}{20}
\]
3. What is the T(N) for method a? Recall, T(N) is the function that represents the actual number of executable statements for a function or algorithm. \( N = \text{listA.length} = \text{listB.length} \)

```java
// pre: listA.length == listB.length
public int a(int[] listA, int[] listB) {
    int total = 0;
    for (int i = 0; i < listA.length; i++)
        for (int j = 0; j < listB.length; j++) {
            total += listA[i] * listB[j];
            total += listA[i] / 10;
            total += listB[j] / 100;
        }
    return total;
}
```

\[ 1 + 1 + N + 1 + N + N(1 + N + 1 + N + N(1+1+1)) + 1 \]
4. What is the worst case order (Big O) of method `d`? Assume `Arrays.fill` is \(O(N)\) and method `process` is \(O(N)\). \(N = \text{data.length}\)

```java
public int[] d(int[] data, int key) {
    int[] result = new int[0];
    for (int i = 0; i < data.length; i++) {
        if (data[i] == key) {
            result = new int[data.length];
            Arrays.fill(data, i);
            process(data, i, key);
            break;
        }
    }
    return result;
}
```
5. What is the best cases order of the following method? Assume method `numRows` is O(1) and that method `process` is O(1). Assume method `numRows` returns the number of rows in the 2d array sent as a parameter.

```java
// mat is a square matrix. All rows have mat.length columns.
public static int num6(int[][] mat) {

    int result = 0;
    for (int r = 0; r < numRows(mat); r++) {
        int[] row = mat[r];
        for (int c = 0; c < mat[0].length; c++) {
            int val = mat[r][c];
            result += process(val, mat, row);
        }
    }
    return result;
}
```
9. What is output by the following code? (it is very gacky)

```java
int n = 64;
int r = 0;
for (int i = 1; i <= n; i *= 2) {
    for (int j = 1; j <= i; j++) {
        r++;
    }
}
System.out.print(r);
```

What is the output of the code if the first line is changed to:

$$1 + 2 + 4 + \cdots + \frac{N}{2} + N = 2N - 1$$
Grading Schedule

- Grading on Saturday
- May spill to Sunday
- Some exceptions ...
Assignment Grading

- Don’t email me for:
  - Disagreeing on taking of a point for something you did

- Please email me for:
  - Mistake with your correctness
  - Mistake with adding up grade
  - Inconsistent deduction w/ past assignment
  - Inconsistency w/ assignment page
  - I took off for something you didn’t do
Assignment Grading

- I can only regrade for the five days after I release grades
- Don’t get stressed about small style deductions:
  - A single exam coding Q is a little less than an entire assignment
  - Assignments only make up 22% of your grade
  - Y’all get 42 slack points + 10 for extra credit
  - I lost 10 points on my first 3 assignments and had slack points to spare (we had ~25)
Common Style Issues

- Spacing on operators: 
  - $3 + 3 \rightarrow 3 + 3$
  - `if(...) -> if (...)`
  - `public int method (){ -> method() {`
  - `//test -> // test`

- Lines should be 100 long (set a vertical line)

- Private instance variables

- Checking preconditions on public methods
Common Style Issues

- USE AN AUTO FORMATTER!!!!!!!
- USE AN AUTO FORMATTER!!!!!!!
- USE AN AUTO FORMATTER!!!!!!!
- USE AN AUTO FORMATTER!!!!!!!
- USE AN AUTO FORMATTER!!!!!!!
Common Style Issues

- Magic numbers:
  - BAD:
    - if (year < 10)
  - GOOD:
    - final int PERIOD_LENGTH = 10;
    - if (year < PERIOD_LENGTH)
  - If you’re using a magic number in multiple methods, declare it at the top of your class.
Common Style Issues

- Returning early:

  // BAD:
  int sum = 0;
  for (int i = 0; i < a.length; i++) {
    if (a[i] == 0) {
      return false;
    }
    sum += 1;
  }
  return sum == 0;

  // GOOD:
  for (int i = 0; i < a.length; i++) {
    if (a[i] == 0) {
      return false;
    }
    sum += 1;
  }
  return true;
Common Style Issues

- Boolean zen (part 1):

  // BAD:
  if (a == 0) {
    return true;
  } else {
    return false;
  }

  // GOOD:
  return a == 0;
Common Style Issues

- Boolean zen (part 2):

  // BAD:
  if (val == true) {
    ...
  }

  // GOOD:
  if (val) {
    ...
  }
Common Style Issues

- Preferred method header comments:

```java
// Calculates the amount of birds in my yard at a given time
// pre: bar != null, t >= 0
// post: returns birds at time t
public int foo(int[] bar, int t) {

// Prints the amount of snails on my desk
// pre: none (For this example, bar handles null vals)
// post: none
public void bar(String desk) {
```
Style Preferences

- I can't take off for this, but I'd prefer:

```java
public void foo(String desk) {
    if (a) {
    }
}
```

// rather than

```java
public void foo(String desk) {
    if (a)
    {
    }
}
```
Common CodeCamp Issues

- **Style:**
  - Improper spacing on operators (3+3 should be 3 + 3)
  - Code or comments exceed 100 in the column space
  - Inadequate descriptions of inputs or outputs
  - Repetitive code AND redundant logic in queensAreSafe
  - Repetitive long if statement in mostVowels
  - Boolean zen
  - Return early if you can!
